CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVII PARKERSBURG, W. VA., APRIL, 1929 No. 4

GENERAL SUMMARY

April was much warmer and considerably wetter than usual. The precipitation was fairly well distributed throughout the month. Heavy rain over the eastern panhandle on the 15-17th, when the falls averaged about 3 inches, caused a moderate flood in the upper portion of the Potomac River. The stage at Harpers Ferry was 3.3 feet above the flood-line. The Ohio River was also at good stages during the month. The month was characterized by hail storms and winds. Farm work and plant growth made poor progress. Pastures and meadows, however, were in excellent condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 55.4°. The departure from the normal for 39 stations having ten or more years of record was +3.9°. The temperature was below the normal on the 2d. The month was practically continuously warm from the 3d to the 14th, the temperature being unusually high from the 5th to the 8th. The temperature was generally somewhat below the normal from the 14th to the 24th, except the 20th-21st. The temperature averaged nearly normal during the last week. The lowest readings were on the 2d, 19th and 23d.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 4.54 inches. The departure from the normal for 58 stations having ten or more years of record was +1.15 inches. The precipitation was heaviest over the northeastern counties. The snowfall was unimportant except in the mountain region. Most of the precipitation was received on the 4-5th, 9-11th, 15-17th, 21st-22d, 25-26th, and the 28-29th, the greatest amounts falling on the 5th, 16th, and 22d.

LIGHT HAIL

Light hail fell in sections of the following counties on dates indicated: April 21.–Cabell, Lewis, Mason, McDowell, Wood, and Pocahontas. April 22.–Lewis, Randolph, Summers, and Upshur. April 25.–Lewis, Pocahontas, and Wirt. April 28.–Grant, Lewis, Hancock, Mason, Randolph, and Upshur.

HEAVY HAIL

Late on the afternoon of April 21 a hail and wind storm passed from Ohio eastward over all the central counties of West Virginia to the Virginia line, the hail and wind being destructive in localities. Roofs were damaged, light buildings and fences blown over, and windows broken. In the Kerens district of Randolph County much damage was done to tar-roofs and windows. Stones half as large as a hen-egg were picked up hours after the storm. At Marlinton light houses were blown over, several roofs blown off, and many windows broken. The damage from this storm was fully $50,000.

On April 25th a severe hail and wind storm moved over Moundsville and vicinity, doing much damage. The United States Stamping Company plant was partly unroofed, causing a loss of about $15,000. It was reported that 40,000 panes of glass were broken in Moundsville and vicinity.

MISCELLANEOUS PHENOMENA

Fogs, dense: Clay, 5th; Hinton, 5th; New Cumberland, 15th; Wheeling, 13th.

Sleet: Horton, 25th; Upper Tract, 16th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 4th, 19; 5th, 5; 6th, 1; 8th, 3; 9th, 3; 10th, 3; 11th, 4; 12th, 3; 14th, 1; 20th, 1; 21st, 11; 22d, 13; 25th, 10; 26th, 3; 28th, 8; 29th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for April, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., May, 1929 No. 5

GENERAL SUMMARY

May was cool and exceptionally wet, being the fourth wettest month of May State record. Amounts in excess of seven inches were received at 16 stations, and more than eight inches fell at five stations. A 24-hour amount in excess of 2.50 inches was noted at only one station – Stony River Dam. Light to heavy frosts and freezing temperatures occurred in many localities of the northern and mountain counties until the 17th, the lowest temperature for the month occurring at 15 stations on that date. Owing to frequent rains and low temperature until the last week, the month was generally unfavorable for farm work and growth. The apple bloom was killed in many localities.

HIGH WIND

About 4:20 p. m., May 2, the meeting of two storms, one up and the other down the Monongahela River, caused much damage in North Morgantown, Evansdale and Riverhead. Several persons were slightly injured and from 30 to 40 houses wrecked or partly destroyed. The most damage apparently occurred at Riverside. The Morgantown Country Club house was also considerably damaged.

On May 2, a severe wind storm, attended by hail, caused considerable damage in sections of Pocahontas and Greenbrier Counties. The storm was apparently most severe in Frankford and Renick communities, where damage was caused to buildings, fences and orchards.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 60.8°. The departure from the normal for 41 stations having ten or more years of record was —1.4°. The weather was cool from the 2d to the 11th and from the 16th to the 24th, with lowest readings on the 3d, 8th, and 17th. The temperature was somewhat above the normal on the 1st, 11-12th, and 14-15th, and considerably above from the 26th to the close of the month.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 5.81 inches. The departure from the normal for 58 stations having ten or more years of record was +1.88 inches. Rain was nearly general from the 1st to the 7th, 12th to the 16th and from the 18th to the 21st, and on the 24-25th and the 28-29th, the greatest amounts being noted on the 3d, 19-20th and 28-29th. Snow flurries or light snow fell in many northern and mountain localities on the 3d.

LIGHT HAIL

Light hail fell in sections of the following counties on dates indicated: Mason and Wood, 2d; Barbour and Lewis, 3d; Grant, 30th.

MODERATE HAIL

Moderate hail fell in sections of Greenbrier and Pocahontas Counties on the 2d.

MISCELLANEOUS PHENOMENA

Halo, lunar: Terra Alta, 16th.
Sleet: Philippi, 3d.

MISCELLANEOUS PHENOMENA (Continued)

Aurora Observed at Terra Alta

On May 16, a band of prismatic colors 3° or more in width and extending from N. 70° to N. 40° E. and rising at the base in that distance perhaps 1° to one and one half degrees, appeared at 7:55 p. m., surmounting a band of clear sky of probably half that width, continuing with diminishing brilliancy and visibility until 8:10 p. m., finally fading out and disappearing entirely at 8:20 p. m. Coincidently with this occurrence there was a lunar corona and this was later followed by a lunar halo, which was fully developed by 8:50 p. m. and then continued through the night.— J. J. Shanahan, E. M.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., June, 1929 No. 6

GENERAL SUMMARY

June averaged considerably cooler and drier than usual. Most of the cool weather prevailed during the first ten days, which retarded farm work and growth. Light to heavy frosts occurred in sections of the more elevated localities on the 4th and 5th, and the lowest temperature of June State record, 28°, was noted at Pickens on the 4th. Temperature near or slightly below the freezing point also occurred at several other stations. The conditions were generally somewhat droughty, especially in the western counties, until the last decade. There was no hail damage reported. The average number of clear days for the month, 16, was exceeded in only one June of State record. During the last two weeks crops made rapid growth and, while late, were generally in excellent condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 43 stations, was 68.2°. The departure from the normal for 37 stations having ten or more years of record was —1.2°. Cool weather prevailed from the 2d to the 12th, with lowest readings on the 4th. The last six days were also cool, especially the 29-30th. The temperature was above the normal from the 12th to the 24th, with the highest readings occurring from the 19th to 22d.

PRECIPITATION

The average precipitation for the State, determined from 78 stations, was 3.50 inches. The departure from the normal for 55 stations having ten or more years of record was —0.73 inch. Moderate rain fell over the southern counties on the 2-3d, and showers occurred in most localities on the 7-8th, 13-14th, 17th, 19-20th, 22d-26th, and the 28th, the greatest amounts being measured on the 8th, 13th, 23d-24th, 26th, and 28-29th.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Cabell, 19th; Randolph, 17, 18th and 22d; Gilmer, 7th and 22d; Grant, 17th, 22d, and 23d; Ohio, 7th, 13th and 28th; Pocahontas, 13th; Parkersburg, 22d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 6th, 9th, 16th, 18th, 20th, and 27th; Bayard, 24th; Buckhannon, 25th; Elkins, 4th, 5th, 16th, and 18th; Fairmont, 4th and 6th; Glenville, 8th and 12th; Hinton, 5th, 11th, 18th, 19th, 21st, 22d, and 27th; Marlinton, 4th, 5th, 6th, 10th, 14th, 16th, 18th, 19th, 21st, 22d, 24th, 27th, 29th, and 30th; Pt. Pleasant, 6th; Terra Alta, 6th; Wellsburg, 4th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 1st, 3; 7th, 8; 8th, 6; 12th, 8; 13th, 12; 14th, 11; 15th, 1; 17th, 10; 18th, 4; 19th, 4; 20th, 3; 21st, 1; 22d, 8; 23d, 12; 24th, 6; 25th, 2; 26th, 1; 28th, 8; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII   Parkersburg, W. Va., July, 1929   No. 7

GENERAL SUMMARY

The month averaged cooler and considerably drier than usual, but the rainfall was unfavorably distributed and there were well-marked periods of warm and cool weather. Owing to heavy rain near the close of the month the precipitation was generally in excess over the southern counties. Dry weather prevailed over the northern counties, especially over the mountain and the eastern panhandle, where the streams were low and the drought rather severe. The warmest weather prevailed near the close of the first decade and during the last week. Crops made good to excellent growth, except in localities where the drought was severe. Some fields of corn were knocked down by wind squalls during thunderstorms. Wheat, hay and oats were harvested under generally favorable weather conditions.

TEMPERATURE

The monthly mean for the State, determined from 42 stations, was 72.7°. The departure from the normal for 34 stations having ten or more years of record was —0.8°. The temperature was somewhat below the normal until the 4th, with the lowest reading of the month on the 3d at about half the stations. Warm weather prevailed from the 5th to the 14th and during the last week. The lowest temperature for the month occurred at many stations on the 21st.

PRECIPITATION

The average precipitation for the State, determined from 77 stations, was 4.09 inches. The departure from the normal for 53 stations having ten or more years of record was —0.42 inch. The rainfall was generally much the heaviest over the southern counties. It was lightest over the extreme eastern counties. The bulk of the rainfall was received on the 1st-2d, from the 5th to the 15th, and on the 26-27th. Light showers fell on the 19th and 22d. The greatest amounts were measured on the 12th and 26-27th.

HIGH WIND

About 9 p. m., July 25, a severe wind storm occurred over a small area in North Point Pleasant. A large brick loft of the Marietta Manufacturing Company was blown down, and the roof of a large stone building belonging to the company was considerably damaged. The path of the storm was from 250 to 300 feet in width, extending from the northwest to the southeast. No other damage reported. There were no indications of a marked rotary movement, but no one observed the storm. The damage was probably caused by a wind-rush during a severe rain and thunderstorm.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 24th, 29th, and 30th; Bancroft, 17th, 18th, 21st, and 26th; Elkins, 6th, 13th, 16th, 17th, 28th, 30th, and 31st; Hinton, 2d, 6th, 11th, 18th, 23d, 24th, and 29th; Fairmont, 30th; Marlinton, 3d, 6th, 8th, 9th, 11th, 17th, 18th, 20th, 28th, 29th, and 30th; St. Marys, 3d, 17th, and 18th; Terra Alta, 11th, 13th, and 28th; Wheeling, 13th, 17th, and 30th.

Frost, light: Bayard and Stony River Dam, 20th; Arbovale, 21st.

Frost, heavy: Bayard, 21st.

Thunderstorms (dates and number of stations reporting): 1st, 3; 2d, 2; 5th, 6; 6th, 6; 7th, 6; 8th, 2; 9th, 12; 10th, 8; 11th, 3; 12th, 5; 13th, 2; 14th, 3; 15th, 1; 17th, 1; 18th, 2; 21st, 1; 24th, 1; 25th, 7; 26th, 14; 27th, 6; 28th, 1; 29th, 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVII PARKERSBURG, W. VA., AUGUST, 1929 No. 8

GENERAL SUMMARY

August was cool and dry. With the exception of four or five days, the temperature averaged below the normal and decidedly cool weather for August prevailed during three short periods. The rainfall was unfavorably distributed, the amounts over the eastern panhandle counties and most of the mountain regions being insufficient for plant growth and an adequate water supply. The conditions were also droughty in many other localities, although the rainfall was slightly in excess at about one-fourth of the stations for the State, owing to hard local showers. Crops made poor growth, except corn. The condition of corn was generally good at the close of the month. The potato crop was severely reduced by drought. The ground was too dry for fall plowing in many localities.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 69.1°. The departure from the normal for 36 stations having ten or more years of record was —2.9°. The temperature was slightly above the normal on the 1st, 11-12th, and 23d-24th. Cool weather prevailed during the other portions of the month and the temperature was much below the normal on the 4-6th and 15-16th and from the 27th to the close of the month, the lowest readings being noted generally on the 16th and 31st.

PRECIPITATION

The average precipitation for the State, determined from 80 stations, was 3.31 inches. The departure from the normal for 56 stations having ten or more years of record was —0.66 inch. The rainfall was generally the heaviest over the western and southern counties and was lightest over the eastern panhandle counties. Nearly all the rainfall was received on the 3d-4th, 11-12th, 14th, 19th, and 22d-23d, but there were scattered showers on the 6-7th, 27-28th and 29-30th.

LIGHT HAIL

Light hail fell in sections of Berkeley, Hampshire and Lewis counties.

HEAVY HAIL

Moderately heavy hail fell over the central portion of Hampshire County on August 27. The storm was most severe near Hoy. The storm came from the northwest, was about one mile in width, and moved from three to four miles. The stones were about three-fourths of an inch in diameter. The esti-nated crop-damage was $15,000.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 30th and 31st; Bancroft, 5th, 8th, th, 10th, 12th, 13th, 16th, 18th, and from the 25th to the 1st; Clay, 5th, 9th, 12th, 19th, and from the 27th to the 1st; Hinton, 2d, 5th, 8th, 10th, 12th, 13th, 19th, 24th, 26th, 8th, and 31st; Huntington, 16th and 31st; Marlinton, 1st, 2d, 5th, 12th to the 22d, and from the 24th to the 31st; New Cumberland, 17th, 26th, and 31st; Parkersburg, 16th; Parsons, 9th; Pt. Pleasant, 12th, 16th, 17th, 27th, and 31st; Terra Alta, 9th, 19th, and 30th; Wheeling, 9th, 13th, 17th, 21st, and from the 26th to the 31st.

THE LIBRARY OF THE

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVII PARKERSBURG, W. VA., SEPTEMBER, 1929 No. 9

GENERAL SUMMARY

The weather elements for September averaged practically normal, although the precipitation was unfavorably distributed over the State. There were also well-marked periods of high and low temperature. A severe drought prevailed over the extreme eastern counties and the conditions were droughty in most of the mountain regions and over the southeastern counties. The temperature was low on the 19th, giving light to killing frosts. The day temperature was high during the first week. As an average, there were 15 clear days, which is also the September average for the past 36 years. Crop yields were less than expected, owing to drought. Pastures were also short.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 66.5°. The departure from the normal for 38 stations having ten or more years of record was +0.8°. Moderately warm weather prevailed from the 2d to the 10th and from the 24th to the 29th, the highest temperature being general from the 2d to the 6th. With the exception of a day or two, the temperature was below the normal from the 11th to the 22d, with the lowest readings on the 19th, when 22 stations recorded a temperature of 32° or below.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 2.95 inches. The departure from the normal for 56 stations having ten or more years of record was —0.21 inch. The rainfall was greatest over the central and western counties and least over the extreme eastern and southeastern counties. Nearly all the rainfall was measured from the 7th to the 10th, the 13th to the 17th, and on the 29th and 30th. There were widely scattered light showers on the 4th, 5th, 6th, 25th, 26th, and 27th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 1st, 2d, 5th, 9th, and 10th; Bancroft, 1st, 2d, 3d, 5th, 7th, 11th, 16th, 19th, 20th, 22d, 23d, 25th, and 28th; Bayard, 1st, 13th, and 28th; Elkins, 1st, 2d, 3d, 5th, 19th, 26th, and 29th; Fairmont, 24th; Glenville, 5th; Huntington, 7th, 15th, and 21st; Mannington, 1st, 2d, 3d, 5th, 7th, 15th, 24th, and 29th; Marlinton, 1st, 2d, 3d, 5th, 6th, 10th, 11th, 15th, 19th, 20th, 22d, 26th, 27th, 28th, and 29th; New Cumberland, 2d and 5th; Parkersburg, 7th, 8th, and 15th; Terra Alta, 1st, 6th, and 30th; Wellsburg, 24th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 6th, 5; 7th, 11; 8th, 10; 9th, 9; 10th, 3; 12th, 1; 16th, 1; 29th, 4; 30th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

CLIMATOLOGICAL DATA

UNIVERSITY ... ILLINOIS

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., October, 1929 No. 10

GENERAL SUMMARY

October averaged cold and exceptionally wet, with an excess of cloudy weather. The temperature was not exceptionally low at any time but averaged below the normal for about twenty days. With the exception of 1925 the precipitation was the greatest of October State record. The average October precipitation for the State was above five inches in only four years of record, as follows: 1911, 5.28 1919, 5.84; 1925, 7.30; 1929, 6.17. Much corn was washed from low bottoms by excessive rains on the 1st-3d and 22d, when streams and small rivers were at flood stages, the loss occurring mostly over the extreme eastern counties and central and northern mountain regions. The apple-crop was secured under generally favorable weather conditions. Winter grains were good at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 44 stations, was 52.6°. The departure from the normal for 37 stations having ten or more years of record was —2.4°. The temperature was above the normal on the 12-13th, 19th-22d, 26-27th, and 30th-31st, the highest readings occurring in most sections on the 20th. Cool weather prevailed from the 1st to the 10th and on the 14-15th, 17-18th, 23d-25th, and 28-29th, the lowest readings occurring mostly on the 18th.

PRECIPITATION

The average precipitation for the State, determined from 79 stations, was 6.17 inches. The departure from the normal for 53 stations having ten or more years of record was +3.21 inches. The precipitation was greatest over the eastern and mountain counties and lightest over the western counties. Most of the precipitation was noted from the 1st to the 4th, the 21st to the 25th, and the 29th to the 31st, with excessive amounts on the 3d and 22d; but moderate rain fell on the 12-13th and 16-17th. In most regions only traces of snow were noted, on the 24th, but at several stations in the mountains the amounts were measurable. The greatest amounts were as follows: Stony River Dam, 1.3 inches; Davis, 1.3 inches; Bayard, 1.0 inch.

FLOOD

At Glenville, on the Little Kanawha River, the river reached the flood stage of 23 feet at 7 a. m., October 3, a crest stage of 23.9 at 8 a. m., and fell back to a stage of 23 feet at 11 a. m. The river reached the flood stage for only a short distance below Glenville. In the Glenville district, it is estimated that corn to the value of $5,000 was washed into the river.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 11th; Bancroft, 8th, 9th, 11th, 14th, 15th, 18th, and 21st; Bayard, 1st and 2d; Brownsville, 15th; Charleston, 17th and 18th; Elkins, 8th, 9th, 14th, and 15th; Glenville, 14th, 15th, and 28th; Hinton, 9th, 14th, 15th, 26th, and 28th; Huntington, 15th, 18th, and 19th; Marlinton, 8th, 9th, 11th, 13th, 14th, 15th, 18th, 19th, and 20th; Parkersburg, 9th, 14th, and 15th; Pt. Pleasant, 14th and 15th; Wellsburg, 15th; Wheeling, 6th, 8th, 9th, 10th, 14th, 15th, 18th, 19th, and 28th.

Hail, light: Bruceton Mills, 16th; Parsons, 3d.

Halos, lunar: Parkersburg, 13th; Terra Alta, 14th.

Sleet: Martinsburg, 30th.

Thunderstorms: Bayard, 16th; Davis, 4th and 14th; Huntington, 3d; Mannington, 3d, 16th, and 22d; Parsons, 16th; Terra Alta, 3d, 16th, and 22d; Wellsburg, 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for October, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., November, 1929 No. 11

GENERAL SUMMARY

The temperature for November averaged nearly normal but the precipitation was decidedly above the normal. While the temperature was near normal, as an average, the month opened with the temperature about 20° above the normal and the temperature at the close of the month was by far the lowest of November State record. The lowest temperature at Parkersburg on the 30th, 4°, was 11.6° below the previous November record. The reading at Elkins on the 30th was 3° below zero, or 8° lower than the previous November record. The average precipitation, 4.52 inches, was exceeded in only two years of November State Record. Excessive rain on the 17-18th caused high stages in the rivers. While a flood stage was not reported in the State, the crest stage at Point Pleasant was 39.6 feet, or only four-tenths of a foot below the flood-line. The conditions were somewhat unfavorable for winter grains, owing to excessive rains and to low temperature at the close of the month, when there was lack of sufficient snow-cover.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 42.9°. The departure from the normal for 38 stations having ten or more years of record was −0.1°. The month opened warm, with the highest temperature of the month on the 1st. The weather was also warm from the 11th to the 18th, with the highest temperature for that period on the 14th. Cool weather prevailed from the 4th to the 10th and from the 20th to the 26th. Exceptionally low temperature for November prevailed on the 29-30th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 4.52 inches. The departure from the normal for 55 stations having ten or more years of record was +1.71 inches. The precipitation was heaviest over the mountain counties and lightest over the eastern counties. Nearly all the precipitation was recorded on the 2-3d, 11th, 14-15th, 17-18th, 22-23d, and 27-29th, the greatest amounts being measured on the 3d, 15th, and 17-18th. Light to moderate snow fell in most regions on the 21-23d and 28-30th, the greatest amounts being measured on the 28-29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 4th and 16th; Bayard, 14th, 15th, and 18th; Bens Run, 6th; Bluefield, 9th; Clay, 5th, 6th, and 9th; Elkins, 9th, 10th, 12th, and 16th; Fairmont, 16th; Glenville, 4th and 16th; Grafton, 14th and 16th; Hinton, 14th; Huntington, 2d and 12th; Mannington, 16th; Marlinton, 9th and 13th; New Cumberland, 13th; Parkersburg, 14th and 16th; Philippi, 8th; Pickens, 3d; Terra Alta, 3d and 16th; Wellsburg, 12th; Wheeling, 7th, 8th, 9th, 12th, 13th, and 23d.

MISCELLANEOUS PHENOMENA (Continued)

Halos, lunar: Huntington, 11th; Parkersburg, 11th and 15th; Ryan, 25th.

Sleet: Martinsburg, 28th; New Cumberland, 20th; Stony River Dam, 28th.

Thunderstorm: Lewisburg, 1st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record. but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1929

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII Parkersburg, W. Va., December, 1929 No. 12

GENERAL SUMMARY

Comparatively speaking, December was warm and dry. While the low temperature period at the close of November continued over December 1, a low temperature after that date was not noted. The precipitation was slightly more than two-thirds of the normal and was well distributed over the State and throughout the month. The average snowfall, 12.2 inches, was much above the normal, having been exceeded in December in only two years of record, or in 1910 and 1914. The greater portion of the snowfall was received on the 22-23d. The ground was practically bare in the agricultural regions during the cold weather on the 1st. The rivers were mostly at low stages. The month was generally favorable for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 36.6°. The departure from the normal for 38 stations having ten or more years of record was + 3.1°. Low temperature prevailed on the 1st and moderately low from the 2d to the 4th and the 19th to the 25th. On the 1st the morning temperature ranged generally from 8° above zero to 10° below zero. The temperature was considerably above the normal from the 5th to the 18th and on the 27-28th and 30th-31st, the highest readings occurring from the 12th to the 17th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 2.51 inches. The departure from the normal for 53 stations having ten or more years of record was —0.77 inch. The greater portion of the precipitation occurred on the 2d, 7-8th, 11-14th, 17-20th, 22d-24th, and 28-29th, the greatest amounts being measured on the 18th and 23d. Light snow occurred in most sections on the 2d and light snow or snow flurries on the 19th, 20th and 21st. Heavy snow, ranging generally from 6 to 10 inches, fell on the 22-23d. Snow also fell on the 24-25th and 29-30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 12th and 28th; Bayard, 11th and 15th; Bens Run, 17th; Bluefield, 9th and 16th; Brandywine, 19th; Clay, 10th and 18th; Glenville, 18th; Hinton, 6th, 9th, 10th, 11th, and 15th; Huntington, 10th, 11th, 12th, 17th, and 26th; Marlinton, 16th; Parkersburg, 18th; Pickens, 11th and 19th; Terra Alta, 2d, 4th, 16th, 19th, and 28th; Wheeling, 15th and 22d.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Bayard, 12th and 28th; Bruceton Mills, 12th; Martinsburg, 12th; Wardensville, 13th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ᵃ, ᵇ, ᶜ appearing in the table indicate number of missing days; for example, ᵇ represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVII PARKERSBURG, W. VA., YEAR, 1929 No. 13

GENERAL SUMMARY

The temperature for 1929 averaged practically normal, the precipitation somewhat more than three inches above the normal, and the snowfall more than ten inches above.

The summer, or from May to August, inclusive, was cool. January, February and October were also moderately cool. March, April and December were warm.

The winter and summer months were dry. April, May and October were wet. The snowfall was heavy in February and December.

Although the summer months were dry, practically all crops made favorable growth. Harvesting in October was delayed by heavy rains.

The season of growth extended generally from April 23 to October 18, being somewhat longer than usual.

Cloudiness was considerably in excess. The sunshine at Parkersburg averaged 42 per cent. of the possible amount, or about 4 per cent. below the normal. For Elkins the average was 44 per cent., or slightly below the normal.

The wind movement for Parkersburg was 43,982 miles, and for Elkins 44,057 miles.

THE WEATHER BY MONTHS

JANUARY: January was slightly colder and considerably drier than usual. The snowfall, 6.1 inches, averaged 2.5 inches below the normal. The highest temperatures prevailed from the 17th to the 19th; the lowest on the 14th. The greatest amounts of precipitation were measured on the 10th and 18-19th The snowfall was greatest on the 12-13th, 28th, and 29-30th. The conditions were generally favorable for winter grains and outdoor work.

FEBRUARY: February was cold, the average temperature being the lowest of February State record since 1914. While the precipitation was practically normal, the snowfall was much above the average, giving ample snow-cover during the lowest temperatures of the month. Boating on the Ohio River was impeded by floating ice until the 15th. The rivers were at moderately high stages at the close of the month.

THE WEATHER BY MONTHS

Continued from page 49

March: March was warm. After the first few days the month was nearly continuously warm. The precipitation was slightly below the normal but the snowfall was above the normal. Practically all the snowfall was received during the last six days. The Ohio River was moderately high during the first ten days and crest stages slightly above the flood line occurred at Marietta and Point Pleasant.

April: April was warmer and considerably wetter than usual. The temperature was unusually high from the 5th to the 8th. The lowest temperatures occurred on the 2d, 19th, and 23d. Heavy rains over the eastern panhandle on the 15-17th, averaging about three inches, caused a moderate flood in the upper portion of the Potomac basin. The Ohio River was also at good stages during the month. The month was characterized by hail storms and high winds. Pastures and meadows were in excellent condition at the close of the month. On the 21st heavy hail and high wind caused considerable damage in portions of Randolph and Pocahontas Counties. On the 25th a severe hail and wind storm passed over Moundsville, damaging the United States Stamping Company plant to the extent of about $15,000.

May: May was cool and exceptionally wet. Rainfall in excess of seven inches was received at 16 stations Light to heavy frosts and freezing temperature occurred in many localities of the northern and mountain counties until the 17th. The apple and peach bloom was killed in many localities. On the 2d a severe wind storm caused considerable damage in Greenbrier County, and a destructive wind on that date partly destroyed from 30 to 40 small houses in the vicinity of North Morgantown.

June: June was cool and dry. Light to heavy frost occurred in localities on the 4th and 5th. The lowest June temperature of State record, 28°, was noted on the 4th. There was much clear weather during the month. Crops made good growth during the last half of the month.

July: July was also cool and dry. The streams were low and the drought quite severe over the northern counties, especially over the eastern panhandle. Crops generally made good growth. Some fields of corn were knocked down by high winds during thundersqualls A severe wind storm on the 25th caused much damage to the Marietta Manufacturing Company plant in North Point Pleasant.

August: August was also cool and dry. The temperature was much below the normal on the 4-6th, 15-16th, and from the 27th to the close of the month, with lowest readings on the 16th and 31st. The condition of corn was generally good at the close of the month. The potato crop was severely reduced by drought.

September: Considering the weather, September was nearly a normal month. The severe drought continued over the extreme eastern and southeaster counties. The temperature was low on the 19th, giving light to killing frosts. As an average, there were 15 clear days.

October: October was cool and exceptionally wet. With the exception of 1925 the precipitation was the greatest of October State record. Much corn was washed from low bottoms along the streams and rivers by high water. The apple crop was secured under favorable conditions. Winter grains were good at the close of the month. The Little Kanawha River was slightly above the flood stage at Glenville on the 3d.

November: November was wet. While the temperature averaged practically normal, the temperature on the 30th was the lowest of November State record. At Parkersburg the temperature was 11° below the previous November temperature record; at Elkins, 8°. Excessive rains on the 17-18th caused high stages in the rivers, but a flood stage was not reached.

December: December was warm and dry. The low temperature period in November continued over December 1, but there was no cold weather after that date. The precipitation was slightly more than two-thirds of the normal, but the snowfall was the heaviest of December State record, except for 1910 and 1914. The greater portion of the snow was received on the 22-23d. The ground was practically bare in the agricultural districts during the cold weather on the 1st.

ERRATA

The following data should be substituted for those published in reports for 1929:

January —Wheeling, make days with rain 15.

April.—Lost Creek, make total precipitation 5.54 and days with rain 10.

August.—Bayard, make total precipitation 4.04 inches.

November.—Jane Lew, make total precipitation, 4.39 inches and number of days with rain 13.

December.—Bluefield, make precipitation on 26th .16 inch.

(WBO, Cleveland, 3-11-30—1150)

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVIII Parkersburg, W. Va., January, 1930 No. 1

GENERAL SUMMARY

January was warm and exceptionally dry, with the snowfall averaging somewhat below the normal. The month was nearly equally divided into warm and cold weather periods, the temperature being generally considerably above the normal until the 16th, when moderately cold weather set in and continued until the close of the month. The precipitation was less than one-half of the normal and was the lowest for January since 1897. The average January precipitation was more than two inches for all previous years of record, except two. There was light to moderate snow-cover during the colder periods of the month. The rivers were at low stages. Boating on the Ohio River was practically suspended from the 27th to the close of the month on account of floating ice. The conditions were generally favorable for winter grains and outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 34.0°. The departure from the normal for 40 stations having ten or more years of record was + 1.9°. The temperature was lowest from the 12th to the 20th and on the 23d-24th, the readings on the 19th and 23d ranging generally from near zero to about 10° below zero. The temperature was highest from the 7th to the 10th, inclusive.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 1.86 inches. The departure from the normal for 56 stations having ten or more years of record was —1.96 inches. The greater portion of the precipitation was received on the 1st-3d, 8-9th, 12-13th, 17-18th, 22d, and 27-28th, the greatest amounts being measured on the 27-28th. Most of the snowfall was received on the 18th, 22d, 27th, and 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 10th and 12th; Arbovale, 10th and 28th; Bancroft, 14th; Charleston, 14th; Huntington, 11th, 12th and 28th; Marlinton, 9th, 10th, 15th, and 28th; Pickens, 10th, 21st, and 22d; Terra Alta, 3d, 21st, 22d, and 28th; Wheeling, 20th; Williamson, 14th.

Halos, lunar: Bayard, 4th and 5th; Elkins, 9th and 12th; Huntington, 9th.

Sleet: Arbovale, 21st; Bayard, 28th; Elkins, 21st; Fairmont, 1th; Glenville, 27th; Grafton, 11th; Lost Creek, 10th; Marlinton, 21st; Martinsburg, 12th and 22d; Parkersburg, 10th; Roanoke, 22d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., FEBRUARY, 1930 No. 2

GENERAL SUMMARY

The month was warm and the precipitation was slightly less than one-half an inch below the normal. February was as warm or warmer in only three years of previous record. In 1909 the average was 40.4°; in 1925, 39.8°; in 1927, 40.9°; while the February average for 1930 was 39.8°. The last half of the month was especially warm. The precipitation was unevenly distributed over the State but favorably distributed throughout the month. The average snowfall, 3.9 inches, was the least of February State record, except in 1909, 1915, 1918, 1919, and 1925. Over the western counties the snowfall was the lightest of February record. The month was generally favorable for outdoor work. Winter grains were also protected by a moderate snow-cover during the cold period of the month.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 39.8°. The departure from the normal for 40 stations having ten or more years of record was +7.6°. Unusually low temperature prevailed on the 15-16th, the lowest temperature of the month occurring on the 16th. The temperature was also slightly below the normal on the 8th and 10-11th. The temperature was high on the 2d and 4th and from the 18th to the 26th, with the highest readings on the 24th and 25th. The averages on the 25th were about 30° above the normal.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 2.62 inches. The departure from the normal for 56 stations having ten or more years of record was —0.4[illegible] inch. The precipitation was lightest over the eastern panhandle and was generally the heaviest over the central counties. Most of the precipitation was received on the 4-5th, 9-10th, 13-16th, and 23d-26th, the greatest amounts being noted on the 4-5th, 12th, and 25-26th. In sections there were light snows on the 7th, 8th, 9th, and 10th, but most of the snowfall was received on the 14-15th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 4th and 24th; Brandywine, 7th and 26th; Crawford, 4th, 5th, and 24th; Elkins, 5th, 21st, and 22d; Glenville, 23d; Grafton, 24th; Lewisburg, 26th; Mannington, 24th; Marlinton, 4th and 24th; New Cumberland, 22d; Parsons, 22d and 24th; Pickens, 4th, 5th, and 7th; Spencer, 24th; Stony River Dam, 5th and 6th; Terra Alta, 4th, 5th, 13th, 23d, and 24th.

Hail, light: Buckhannon and Clarksburg, 24th; Brownsville, 25th.

Halo, lunar: Elkins, 14th.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Arbovale, 4th; Bayard, 5th and 7th; Crawford, 5th; Elkins, 2d and 5th; Marlinton, 13th; Pickens, 5th; Terra Alta, 8th; Williamson, 5th.

Thunderstorms (dates and number of stations reporting): 24th, 17; 25th, 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for February, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., MARCH, 1930 No. 3

GENERAL SUMMARY

March averaged considerably colder and somewhat drier than usual. There was but one outstanding warm period. On the 16-18th buds formed on cherry, plum and peach trees but bud development was checked by colder weather during the last two decades. With the exception of one or two days, the minimum temperatures were below freezing in nearly all parts of the State after the 19th. The precipitation was well distributed throughout the month and generally favorably distributed over the State. As a rule the winds were light to moderate. The fruit crop was believed safe at the close of the month. Farm work advanced normally.

TEMPERATURE

The monthly mean for the State, determined from 44 stations, was 40.3°. The departure from the normal for 37 stations having ten or more years of record was −2.3°. Moderately cold weather prevailed from the 2d to the 5th, 21st to the 24th, and from the 25th to the close of the month, with lowest temperature on the 3d. The temperature fell to zero at only one station, Pickens. The temperature was somewhat to considerably above the normal on the 6-7th, 10-11th, 16-18th, and 24th, the highest readings being observed on the 16th and 17th.

PRECIPITATION

The average precipitation for the State, determined from 81 stations, was 3.21 inches. The departure from the normal for 56 stations having ten or more years of record was −0.73 inch. Most of the precipitation was received on the 2-3d, 7-8th, 11-12th, 18-19th and 25-26th, the greatest amounts being measured on the 7-8th and 18-19th. Most of the snowfall was measured on the 2-3d and 26th, although light snow or snow flurries were reported on several other days at the more elevated stations.

MISCELLANEOUS PHENOMENA

Fogs, dense: Hinton, 10th; Terra Alta, 8th and 19th; Wheeling, 6th, 16th, 17th, 24th, and 29th.

Hail: Crawford, 2d; Parkersburg, 1st; Parsons, 25th.

Halos, lunar: Parkersburg, 10th and 11th.

Sleet: Bayard, 8th and 19th; Marlinton, 7th and 26th; New Cumberland, 12th; Pickens, 19th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms: Aberdeen, 2d; Bruceton Mills, 1st; Crawford, 2d; Hinton, 7th; Jane Lew, 2d; Mannington, 2d; Parkersburg, 1st; Ryan, 2d, 7th, and 25th; Wheeling, 18th and 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for March, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVIII Parkersburg, W. Va., April, 1930 No. 4

GENERAL SUMMARY

April was warm and exceptionally dry. While the temperature averaged less than 2° above the normal, the second decade was decidedly warm. The average precipitation was the lightest of April record since 1915. Only three previous Aprils were dryer. The conditions were droughty after the first ten days. Only traces of snow fell in most of the Agricultural districts, while moderate snow storms occurred on two or three days in the more elevated portions of the State. The greatest fall for the month, 10 inches, was at Pickens. High temperature during the second decade caused a rapid advancement of growth and bloom. Freezing temperature during the early morning hours from the 23d to the 27th caused great damage to fruit bloom and grape vines. Many fields of young plants were also killed.

TEMPERATURE

The monthly mean for the State, determined from 43 stations, was 53.2°. The departure from the normal for 35 stations having ten or more years of record was + 1.6°. The temperature averaged slightly below the normal for the first decade. From the 10th to the 19th the weather was warm, especially on the 11th and 12th, when the highest temperatures were noted. Cold weather, with heavy to killing frosts in nearly all regions, prevailed from the 22d to the 27th. The month closed warm.

PRECIPITATION

The average precipitation for the State, determined from 78 stations, was 1.95 inches. The departure from the normal for 53 stations having ten or more years of record was —1.57 inches. Practically all of the precipitation was received on the 1st-2d, 6-7th, 15-16th, 18-19th, 21st-22d, 23d-24th, and 29th, the greatest amounts being measured on the 2d and 7th. Practically all the snowfall was received on the 6-7th and 24th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 12th, 14th, 20th, 29th, and 30th; Clay, 29th and 30th; Terra Alta, 22d; Wheeling, 10th.

Hail, light: Arbovale, 21st; Creston, 7th and 21st; Roanoke, Ryan, and Terra Alta, 21st; Wellsburg, 14th; Wheeling, 7th.

Halo, lunar: Huntington, 5th.

Sleet: Bayard, 3d; Huntington, 7th; Parkersburg, 7th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 4th, 1; 6th, 1; 8th, 1; 13th, 1; 14th, 2; 16th, 4; 17th, 1; 18th, 8; 19th, 2; 21st, 11; 22d, 3; 28th, 1; 30th, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for April, 1930

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., MAY, 1930 No. 5

THE LIBRARY OF THE
JUL 17 1930
UNIVERSITY OF ILLINOIS

GENERAL SUMMARY

May was warm and exceptionally dry. The first half of the month was decidedly warm and the last half decidedly cool, with the exception of a few days in each period. After the 25th the temperature was near or considerably below freezing in most sections of the State, causing a great loss to beans and doing considerable damage to potatoes and corn. The cool weather also caused a marked apple drop. The average rainfall, 2.17 inches, was the least of May record, except in 1911 and 1914. In every other year of State record the combined rainfall for April and May exceded the rainfall for the same period in 1930. At the close of May a severe drought prevailed in nearly all portions of the State, all crops suffering for moisture. Pastures and fields were especially short.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 63.3°. The departure from the normal for 36 stations having ten or more years of record was + 1.3°. The temperature was above the normal until the 14th, except the 3-4th. From the 6th to the 12th the temperature averaged about 12° above the normal. From the 15th to the end of the month the weather was mostly cool, the temperature being especially low after the 25th, with light to killing frosts on the 26th, 30th and 31st, causing much damage to crops.

PRECIPITATION

The average precipitation for the State, determined from 80 stations, was 2.17 inches. The departure from the normal for 54 stations having ten or more years of record was −1.74 inches. The rainfall was heaviest over the northern mountain counties and was lightest over the eastern panhandle and the extreme western counties. Practically all the rainfall was received on the 5-6th, 12-16th, 18-19th, 24th, and the 27-28th, the greatest amounts being measured on the 14-15th and 18-19th. Snow was not noted at any station in the State.

LIGHT HAIL

Light hail was noted in sections of Tucker County on the 12th, and in sections of Brooke, Lewis, Kanawha, Pocahontas, and Upshur counties on the 14th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 13th, 21st, 22d, 25th, and 31st; Elkins, 22d; Mannington, 13th, 22d, 23d, 25th, 26th, 30th, and 31st; Marlinton, 6th, 7th, 22d, and 23d; New Cumberland, 30th; Terra Alta, 18th.

MISCELLANEOUS PHENOMENA (Continued)

Halo, lunar: Elkins, 8th.

Thunderstorms (dates and number of stations reporting): 1st, 7; 3d, 2; 5th, 6; 6th, 8; 7th, 1; 11th, 4; 12th, 6; 13th, 3; 14th, 5; [illegible]th, 5; 19th, 2; 28th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1930

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVIII   Parkersburg, W. Va., June, 1930   No. 6

GENERAL SUMMARY

The weather for June was exceptional. One of the most severe droughts of record for the State during the growing season continued throughout the month, without doubt the most severe over the eastern and southern counties, and over the Ohio and Great Kanawha River counties. All crops suffered severely from lack of moisture and crops in many localities were practically failures. While the temperature averaged but slightly below the normal, the lowest temperature (at two stations) of June State record occurred on the 1st., attended by light to killing frosts, causing considerable damage to crops, and only one June of record had a higher temperature, June in 1925. For the State, the average number of clear days was 17, also the record for June.

TEMPERATURE

The monthly mean for the State, determined from 45 stations, was 68.9°. The departure from the normal for 36 stations having ten or more years of record was −0.2°. The month opened unusually cool and the temperature was considerably below the normal from the 7th to the 11th and near the normal from the 17th to the 22d. The 27-28th were also cool. High temperature prevailed from the 3d to the 5th, 23d to the 25th and on the last two days. As a rule, the highest temperatures occurred on the 24th and 30th, but over the eastern panhandle the highest were noted on the 4th and 5th at nearly all stations.

PRECIPITATION

The average precipitation for the State, determined from 81 stations, was 2.87 inches. The departure from the normal for 55 stations having ten or more years of record was −1.60 inches. Most of the precipitation was recorded on the 6-7th, 9-10th, 16-17th, and 24th, the greatest amounts being recorded on the 10th, 17th and 24th.

LIGHT HAIL

Light hail occurred in sections of the following counties on dates given: Grant, 8th; Pleasants, 18th; Preston, 24th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 18th; Bancroft, 11th; Elkins, 11th and 23d; Fairmont, 29th; Mannington, 9th, 11th, 20th, and 23d; Marlinton, 2d to the 5th; 11th to the 13th; 19th to the 22d; 24th, and from the 26th to the 30th; New Cumberland, 2d and 9th; Terra Alta, 25th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 6th, 1; 8th, 1; 9th, 3; 13th, 2; 16th, 3; 17th, 2; 18th, 3; 19th, 1; 24th, 17; 25th, 2; 26th, 6; 27th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for June, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVIII Parkersburg, W. Va., July, 1930 No. 7

GENERAL SUMMARY

The weather conditions for July, 1930, were radically abnormal. The average rainfall for the State, 1.90 inches, was the least of July State record, and the fall at one station, .06 inch at Wardensville, was the least recorded for any July at any station for the years of record. The precipitation was deficient by months, from January to July, inclusive, the State deficiency for that period being 10.66 inches. For the past four months, including July, the departure from the normal was —7.40 inches. The most destructive drought of State record prevailed during June and July, continuing into August. The hay crop was small, oats were short and poor, and pastures and meadows were burned brown. Corn at the close of July was small and twisted from lack of moisture and continued high temperature. The smaller streams were dried-up and many wells failed, making water scarce for stock and domestic uses. The crop conditions were best in the middle or mountain portions of the State. With the exception of three years, the temperature averaged the highest of July State record. At Moorefield a maximum temperature of 109° was noted, the highest of State record for July. The weather was also exceptionally clear, the average number of clear days being 21, the greatest of record, except for the months of September and October.

TEMPERATURE

The monthly mean for the State, determined from 46 stations, was 74.9°. The departure from the normal for 36 stations having ten or more years of record was +1.8°. Moderately cool weather prevailed from the 2d to the 5th and during the 14th and 15th. It was moderately warm from the 6th to the 13th and decidedly warm from the 18th to the 29th, when the maximum temperatures ranged generally from 90° to 104°. The highest temperature occurred generally on the 20th and 28th.

PRECIPITATION

The average precipitation for the State, determined from 82 stations, was 1.90 inches. The departure from the normal for 54 stations having ten or more years of record was —2.59 inches. The rainfall, was greatest over the mountain regions and least over the eastern panhandle counties. Nearly all the rainfall of consequence was measured on the 1st-2d, 6-7th, 13-14th, 22-23d and the 27-28th, the greatest amounts being measured on the 13-14th, 22d, and 27th.

LIGHT HAIL

Light hail fell in sections of the following counties on the dates given: Hancock, 2d; Brooke, 8th; Mineral, 9th; Pocahontas, 10th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d and 23d; Elkins, 4th and 28th; Fairmont, 15th; Mannington, 7th, 8th, 15th, and 16th; Marlinton, 3d, 4th, 8th, 15th, 16th, 18th, 19th, 23d, and 29th; Pickens, 14th; Rowlesburg, 6th and 27th; Terra Alta, 14th, 15th, and 27th; Wellsburg, 8th and 15th.

Frost, light: Bayard, 4th.

Halos, lunar: Huntington, 4th and 11th.

Thunderstorms (dates and number of stations reporting): 1st, 5; 2d, 2; 6th, 7; 7th, 5; 9th, 1; 10th, 3; 12th, 2; 13th, 6; 14th, 2; 21st, 1; 22d, 12; 23d, 2; 26th, 2; 27th, 3; 28th, 4; 29th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.

† Also on other dates. †† Received too late to be included in means and summaries.

Reference letters ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1930

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., AUGUST, 1930 No. 8

GENERAL SUMMARY

The weather for August was erratic. The temperature was unusually high during the first decade, the highest temperature of August State record, 112°, having been recorded on the 4th. The weather was generally cool during the last two decades, the lowest temperature of State August record, 30°, having been recorded at two stations, Alpena and Bayard, on the 12th, when light to killing frosts occurred in the mountain counties, doing considerable damage to corn, potatoes, buckwheat and tomatoes. The average rainfall was the fourth lowest of August State record. The rainfall for the five months ending with August was the lowest for any five-month period of State record. For the past three months a serious drought prevailed and the conditions were not materially improved at the close of August. In the driest portions of the State corn was nearly a failure, the potato yield exeedingly small, truck fields poor, and pastures and meadows were burned brown by lack of moisture and by high temperature.

TEMPERATURE

The monthly mean for the State, determined from 48 stations, was 70.7°. The departure from the normal for 38 stations having ten or more years of record was −1.1°. High temperature prevailed until the 10th. The weather was generally somewhat cool after that date, except the 15-17th and the last four days of the month, when slight plus departures occurred.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 2.20 inches. The departure from the normal for 57 stations having ten or more years of record was −1.95 inches. The rainfall was greatest over the southern counties, especially in the more elevated regions. It was lightest over the eastern panhandle and the western counties. The bulk of the rain fell on the 6-8th, 14th, 17-18th, and from the 21st to the 25th, the greatest amounts being recorded on the 14th.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Jefferson, 15th; Cabell, 23d; Randolph, 26th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 6th, 7th, and 28th; Bancroft, 2d, 16th, 19th, 20th, 25th, 26th, 28th, and 30th; Elkins, 7th, 19th, 25th, and 28th; Hinton, 16th, 26th, 27th, and 28th; Huntington, 6th; Mannington, 7th, 15th, 16th, and 28th; Marlinton, 2d, 3d, 7th, 9th, 16th, 17th, 19th, 21st, 24th, 25th, 28th, 30th, and 31st; Point Pleasant, 15th, 16th, and 28th; Terra Alta, 7th and 18th; Thomas, 7th and 12th; Wellsburg, 9th and 21st; Wheeling, 7th, 9th, 25th, 27th, and 28th.

MISCELLANEOUS PHENOMENA (Continued)

Frost, killing: Alpena, 12th and 13th; Arbovale, Bayard, Pickens, and Terra Alta, 12th.

Halo, lunar: Wellsburg, 7th.

Halo, solar: Terra Alta, 7th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 5th, 4; 6th, 4; 8th, 5; 10th, 2; 13th, 1; 16th, 2; 17th, 2; 18th, 2; 20th, 2; 21st, 3; 24th, 3; 25th, 2; 26th, 8; 27th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., SEPTEMBER, 1930 No. 9

GENERAL SUMMARY

September averaged dry and warm. It was the driest September since 1908 and also the driest month of the year to date. While the driest, the departures from the averages were greater for six months, as the following averages and departures from the normals, in inches, for 1930 indicate: January, 1.86, departure —1.96; February, 2.62, departure —0.47; March, 3.21, departure — 0.73; April, 1.95, departure —1.57; May, 2.17, departure —1.74; June, 2.87, departure —1.60; July, 1.90, departure —2.59; August, 2.20, departure —1.95; September, 1.46, departure —1.57. While warm, the average temperature for September was higher for five years of State record. The average number of clear days was 15, or normal. The month closed cool, with light to heavy frosts. Rivers and streams continued low during the month and the water supply for domestic and manufacturing purposes was exceptionally low. While the drought continued unabated, the season was too far advanced to cause much further damage to crops.

TEMPERATURE

The monthly mean for the State, determined from 47 stations, was 69.3°. The departure from the normal for 37 stations having ten or more years of record was +3.5°. The month opened warm and the temperature was also considerably above the normal from the 11th to the 16th and the 21st to the 26th. The temperature was near the normal from the 3d to the 11th and from the 17th to the 20th. The last four days were cool, with light to heavy frost on the 29th and 30th.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 1.46 inches. The departure from the normal for 57 stations having ten or more years of record was —1.57 inches. Nearly the entire precipitation fell on the 3d, 7-8th, 16th, 24th, 25th, and 26th, the greatest amounts being noted on the 8th, 16th and 25th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 14th. 15th, 20th, 25th, and 26th; Bancroft, 2d, 4th, 8th, 14th, 18th, 20th, 21st, 28th, and 29th; Charleston, 29th and 30th; Clay, 9th, 10th, 25th, 26th, and 30th; Elkins, 4th, 9th, 10th, and 15th; Hinton, 14th, 20th, and 26th; Marlinton, 1st, 2d, 4th, 6th, 11th, 14th, 15th, 16th, 19th, 20th, 22d, 23d, 24th, 26th, and 28th; Pt. Pleasant, 29th, Terra Alta, 3d, 9th, 10th, and 11th; Thomas, 10th; Wheeling, 24th and 30th.

Halo, lunar: Ryan, 11th.

MISCELLANEOUS PHENOMENA (Continued)

Halos, solar: Rainelle, 18th; Ryan, 10th, 18th, and 20th; Terra Alta, 18th.

Thunderstorms (dates and number of stations reporting): 2d, 1; 3d, 5; 5th, 1; 9th, 1; 13th, 4; 15th, 1; 16th, 3; 24th, 3; 25th, 2; 26th, 7; 27th, 3; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for September, 1930

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXVIII Parkersburg, W. Va., October, 1930 No. 10

GENERAL SUMMARY

The severe summer drought continued through October, the October rainfall being considerably the lowest of any month for the year. There was not enough precipitation to reach the smaller rivers. In many sections of the State water was scarce for domestic use, and there was practically no water for power purposes. The precipitation for October was below 1 inch for only five years of record, including 1930. Light snow fell generally in the mountain districts during the last week of the month. The month was decidedly cold. Freezing temperature and killing frosts occurred in most sections on the 20th, and on the 22d the temperature fell to the October record up to that date. The apple-crop was secured under favorable weather conditions. Winter grains were in good condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 50.5°. The departure from the normal for 42 stations having ten or more years of record was —4.2°. The highest monthly mean was 56.8° at Charleston, and the lowest, 41.2° at Pickens. The month opened cool and cool weather continued until the 3d. The temperature was much below the normal from the 17th to the 27th. The last two days of the month were also cool. Moderately warm weather prevailed from the 11th to the 16th. The highest temperatures occurred generally on the 11th, 13th, and 14th, and the lowest on the 22d.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 0.96 inch. The departure from the normal for 59 stations having ten or more years of record was —2.16 inches. The greatest monthly amount was 1.89 inches at Bluefield, and the least, 0.08 inch at Moorfield. Practically all the precipitation was recorded on the 8-9th, 16-18th, 23d-24th, 28th, and 31st. In most regions only traces of snow were noted, but at several stations in the mountains the amounts were measurable. The greatest amounts were as follows: Arbovale, 2.0 inches; Horton, 1.1 inches; Pickens, 2.0 inches; Thomas, 1.5 inches.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 11th, 12th, 15th, and 16th; Bancroft, st to the 7th, 10th, 11th, 13th, 16th, and 30th; Elkins, 1st, d, 4th, 5th, 10th, 12th, 14th, 15th, 16th, and 30th; Fairnont, 1st, 2d, 6th, 11th, 14th, and 15th; Hinton, 10th, 11th, 6th, 17th, and 28th; Huntington, 6th, 10th, 11th, and 22d; arlinton, 3d, 10th, 12th, and 13th; New Cumberland, 23d nd 30th; Parkersburg, 1st, 2d, 10th, and 22d; Point Pleasant, 0th and 22d; Ravenswood, 26th; Terra Alta, 10th, 12th, 4th, 15th, 16th, and 24th; Wellsburg, 6th, 10th, 11th, 13th, 5th, and 16th; Wheeling, 1st, 3d, 6th, 8th, 10th, 12th, 3th, 15th, 16th, 21st, 23d, 26th, 27th, and 31st.

MISCELLANEOUS PHENOMENA (Continued)

Halos, lunar: Huntington, 4th and 5th.

Halos, solar: Elkins and Parsons, 7th.

Sleet: Marlinton and Parsons, 23d.

Thunderstorms: Martinsburg, 16th and 31st; Terra Alta, 16th; Wardensville, 31st.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., NOVEMBER, 1930 No. 11

GENERAL SUMMARY

The precipitation averaged only about one-half the normal, making the eleventh consecutively dry month. While the precipitation was insufficient to reach the smaller rivers, soil conditions were excellent for outdoor work. The snowfall, however, was more than twice the normal, winter grains being well protected during the cold period of the month. The greatest amounts of snowfall for the month were as follows: Horton, 25 inches; Pickens, 33 inches; Richwood, 17.5 inches; Alpena, 16.5 inches. Most of the snow melted before the close of the month. The temperature averaged near the normal. The month was characterized by a long period of moderately warm weather, and a rather short period of decidedly cold weather for November, the temperature falling to below previous State November records at many stations. There was ample sunshine, the number of clear days for the State being near the normal.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 42.3°. The departure from the normal for 39 stations having ten or more years of record was —0.2°. Low temperature continued from October until the 8th, the temperature being the lowest for that period on the 6-7th. It was decidedly cold from the 25th to the 31st, with a cold wave on the 27-28th, when the temperatures were from near zero to more than 10° below zero. A prolonged period of warm weather prevailed from the 10th to the 23d, the temperature being the highest on the 14th, 19th and 21st.

PRECIPITATION

The average precipitation for the State, determined from 84 stations, was 1.42 inches. The departure from the normal for 56 stations having ten or more years of record was —1.38 inches. The precipitation was greatest over the mountain regions and least over the eastern panhandle and the Ohio River counties. The bulk of the precipitation was measured on the 4-5th, 12-13th, 16-18th, 22d, 25-27th, and 30th, the greatest amounts being on the 5th and 25-26th. Snow, moderately heavy in most of the mountain regions, occurred from the 24th to the 27th. The falls were generally light in most of the agricultural districts.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 5th; Arbovale, 12th and 18th; Bancroft, 19th; Beckley, 18th; Clay, 13th, 18th, and 19th; Elkins, 13th, 15th, 17th, 18th, and 19th; Fairmont, 18th, 19th, and 20th; Glenville, 15th, 17th, and 20th; Hinton, 13th, 19th, 21st, and 24th; Huntington, 12th, 15th, and 18th; Marlinton, 17th, 19th, and 21st; Martinsburg, 22d; New Cumberland, 4th, 15th, 18th, 19th, and 20th; Parkersburg, 13th and 18th; Point Pleasant, 7th, 13th, and 18th; Robertsburg, 12th and 13th; Spencer, 18th; Terra Alta, 5th, 13th, 18th, 19th, and 21st; Wellsburg, 14th; Williamson, 20th.

Halos, lunar: Elkins, 2d and 3d.

Sleet: Arbovale, 4th; Marlinton and Piedmont, 30th.

Smoke, light: Lost Creek, 9th to the 12th; Mannington, 9th to the 11th.

Thunderstorms: New Cumberland and Parkersburg, 17th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1930

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

VOL. XXXVIII PARKERSBURG, W. VA., DECEMBER, 1930 No. 12

GENERAL SUMMARY

December averaged cold and dry. It was the coldest December since 1919. The temperature averaged below the normal for about twenty days and the maximum temperatures were unusually low. A temperature of zero or below occurred at slightly more than one-third of the stations. While the precipitation was considerably below the normal, it was sufficient to fill and washout the streams and break the longest and most severe drought of State record. More rain was needed, however, to soak into the ground and provide a water supply for springs and wells. The snowfall was considerably above the normal and was received mostly during the last half of the month. The month was generally cloudy. The weather was generally favorable for winter grains and for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 30.9°. The departure from the normal for 42 stations having ten or more years of record was —2.4°. The temperature was below the normal for the last half of the month, except for two or three days, when the temperature was practically normal. The temperature was also low on the morning of the 2d, when the lowest reading of the month occurred at six stations. The lowest temperature was generally on the 25th, but occurred at several stations on the 16th, 17th and 31st. The warmest weather occurred from the 6th to the 8th and the 9th to the 12th, with the temperature highest in most sections on the 3d, 4th, 10th and 11th.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 2.81 inches. The departure from the normal for 61 stations having ten or more years of record was —0.70 inch. The precipitation was generally greatest over the central and the eastern panhandle counties. It was lightest over the southern and the Ohio River counties. The greater portion of the precipitation occurred on the 6-8th, 11-12th, 17-20th, 23d-27th and 31st., the greatest amounts being measured on the 6th and 26-27th. Most of the snowfall occurred on the 17th, 19th, 24th, 27th and 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 14th; Arbovale, 5th and 6th; Beckley, 15th; Marlinton, 21st; New Cumberland, 10th; Pickens, 26th, 27th, 28th, and 29th; Terra Alta, 7th, 8th, 11th, 18th, and 28th; Stony River Dam, 6th.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Alpena, 9th; Arbovale, 26th; Bayard, 26th; Beckley, 7th; Bens Run, 30th; Crawford, 8th; Marlinton, 26th; Martinsburg, 26th and 29th; Pickens, 8th; Ryan, 26th; Stony River Dam, 28th; Upper Tract, 6th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, a, b, c appearing in the table indicate number of missing days: for example, b represents two days, etc.

Daily Precipitation for December, 1930

HENRY C. HOWE, Meteorologist

Vol. XXXVIII PARKERSBURG, W. VA., YEAR, 1930 No. 13

GENERAL SUMMARY

Nineteen hundred thirty will go down in meteorological records as the year of the great drought. The average annual rainfall, 25.20 inches is by far the lowest of State record. The precipitation averaged below the normal for every month in the year. In most sections of the State wells and springs and small streams were practically dry and water for stock, domestic uses, and manufacturing plants was scarce. Many cities and towns hauled water for domestic uses, and manufacturing plants, depending on water power, were practically closed the entire summer and fall. The rivers continued low, no flood stage occurring in the Parkersburg river district or in any river in the State.

As a rule, the precipitation was greatest in February and March but some stations had moderate rainfalls in May, August, and December. The snowfall was greatest in January, March, and December. The total snowfall for the year was only slightly below the normal.

The temperature averaged more above the normal in January, February, April, May, July, and September, and the greatest deficiencies in temperature were in March, October, and December.

The conditions were decidedly unfavorable for growth, most crops not in river valleys being decidedly poor. Pastures and meadows were burned brown by drought and heat.

The season of growth extended from about April 25 to October 1, being somewhat longer than usual.

The number of clear days was much in excess. The sunshine at Parkersburg averaged 47 per cent. of the normal; at Elkins 53 per cent., being much above the normal.

The wind movement for Parkersburg was 43,321 miles, and at Elkins 39,355 miles.

THE WEATHER BY MONTHS

JANUARY.—The month was warm and exceptionally dry. The precipitation was less than one-half the normal and was the least for any January since 1897. The average January precipitation was more than two inches for all previous years of record, except two, while for this month it was only 1.86 inches. The temperature was generally considerably above the normal for the first half of the month and the last half was moderately cold. On account of floating ice, navigation on the Ohio River was practically suspended from the 27th to the close of the month.

Continued on page 51

Reference letters indicate number of days missing; [a] one day, [b] two days, etc.

THE WEATHER BY MONTHS (Continued from page 49)

FEBRUARY.—February was warm, with the precipitation slightly less than one-half an inch below the normal. In only three years of record was the average February temperature higher. The snowfall was unusually light, being the lightest of February record over the western counties. The month was favorable for outdoor work and winter grains.

MARCH.—March was also drier than usual. On the 16-18th buds formed on cherry, plum and peach trees, but bud development was checked by colder weather during the last two decades. With the exception of one or two days the night temperatures fell to freezing or below in all parts of the State after the 19th. The fruit crop was safe at the close of the month.

APRIL.—April was warm and exceptionally dry In only three previous years was the April precipitation lighter. Only traces of snow fell in most of the agricultural districts. Freezing temperature during the early mornings from the 23d to the 27th caused great damage to fruit bloom and grape vines Many fields of young plants were killed.

MAY.—May was also exceptionally dry. The combined rainfall for April and May was the lightest of State record for that period. The first half of the month was decidedly warm and the last half decidedly cool, with the exception of a few days in each period. After the 25th the temperature was near or considerably below freezing in most portions of the State, causing a marked apple-drop and damaging beans, potatoes and corn. At the close of May a severe drought prevailed.

JUNE.—The weather for June was also exceptional. A severe drought prevailed, probably the most severe of record over the southern and eastern counties. All crops suffered severely from lack of moisture and crops in many localities were practically failures. The lowest temperature of June State record occurred on the 1st, causing much damage to crops. A temperature of 105° occurred on the 24th, the highest of June record, except in 1925

JULY.—The rainfall for July was the least of July State record. For the past four months, including July, the rainfall deficiency was 7.40 inches, and from the first of the year the deficiency was 10.66 inches. The most destructive drought of State record prevailed. Small streams were dry and many wells failed, causing an acute shortage of water for stock and manufacturing purposes. The temperature was high. A maximum of 109° was reached at Moorefield, the highest of State record for July.

AUGUST.—The temperature was unusually high during the first decade, and the highest temperature of August State record, 112°, was reached on the 4th Cool weather prevailed during the last two decades The lowest temperature of August State record, 30°, occurred at two stations on the 12th, when light to killing frost occurred in the mountain counties, doing considerable damage to staple crops. The severe drought continued unabated, the rainfall for August being but slightly more than half the normal. Great damage resulted to all staple crops. Pastures and meadows were burned brown.

SEPTEMBER.—September was also exceptionally dry, the rainfall being less than half the normal. Rivers and streams continued low during the month and the water supply for all purposes was exceptionally low. The month closed cool, with light to heavy frosts.

OCTOBER.—The severe summer drought continued through October, the October rainfall being considerably the lowest of any month of the year. The precipitation was insufficient to reach the smaller streams. Freezing temperature and killing frost occurred in most sections on the 20th and on the 22d the temperature fell to the October record up to that date.

NOVEMBER.—The November precipitation was only about one-half the normal. The snowfall, however, was more than twice the normal. Most of the snow melted before the close of the month. A cold wave prevailed on the 27-28th, when the temperature fell to near zero to more than 10° below zero. Moderately warm weather prevailed during the second decade.

DECEMBER.—December averaged cold and dry, making the precipitation below the normal for every month of the year. It was the coldest December since 1919. A temperature of zero or below was noted at slightly more than one-third of the stations. While the precipitation averaged light it was enough to fill and washout the streams and break the longest and most severe drought of State record. The snowfall was considerably above the normal.

ERRATUM

The following change should be made in published report for 1930:
May.—Weston, make greatest 24-hour precipitation 0.40 inch on the 16th.

Monthly and Annual Precipitation for the Year 1930, with Departures from Normal

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

HENRY C. HOWE, Meteorologist

Vol. XXXIX Parkersburg, W. Va., January, 1931 No. 1

GENERAL SUMMARY

Following the driest year of State record, the past month, with an average precipitation of 1.37 inches, was the driest January of record. The average departure from the normal was −2.49 inches. While last year's drought was partly broken in December, a marked drought prevailed at the close of January. Streams continued low and water for nearly all purposes was scarce. The average snowfall was less than one-half the normal and the ground was practically bare in most of the agricultural regions during the cold periods of the month. The temperature averaged considerably above the normal and moderately cold weather prevailed only on three or four days. The conditions were generally favorable for outdoor work and for winter grains.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 33.7°. The departure from the normal for 42 stations having ten or more years of record was +1.7°. Moderately cold weather prevailed on the 1st-2d, 14-16th, and 22-23d, with the lowest readings occurring on the 2d, 16th and 22d. The temperature was considerably above the normal on the 5-6th, 17-19th and 24th-31st, with the highest readings on the 25th.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 1.37 inches. The departure from the normal for 60 stations having ten or more years of record was −2.49 inches. The precipitation was heaviest over the central counties and generally lightest over the eastern panhandle and the Ohio River counties. Practically all the precipitation was received on the 5-6th, 12th, 14-15th, 19th-21st, and 26-27th The snowfall at about one-fifth of the stations was only a trace. Nearly the entire snowfall was measured on the 5-6th, 13-15th, 20th-21st, and 31st.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 12th; Hinton, 5th, 9th, 23d, and 24th; New Cumberland, 9th and 19th; Richwood, 26th; Terra Alta, 5th, 12th, 27th, and 28th.

Hail: Aberdeen, Glenville, Kingston, Mannington, Martinsburg, and Roanoke, 5th; Wardensville, 9th.

Halos, lunar: Huntington, 28th; Piedmont, 3d; Richwood, 25th.

Sleet: Beckley, 6th; Lost Creek, 5th.

MISCELLANEOUS PHE[illegible]NA (Con[illegible]

Thunderstorms: Aberdeen, Beckley, [illegible]arksburg, Creston, Huntington, Kingston, Point Pleasant, R[illegible]ke, Ryan, and Williamson, 5th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for January, 1931

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., FEBRUARY, 1931 No. 2

GENERAL SUMMARY

The February temperature averaged considerably above the normal while the precipitation averaged considerably below. The temperature fluctuations were slight. The highest reading for the month was 68°, which is the lowest maximum for any February of record since 1907. The minimum temperature, 5°, was the highest minimum for any February of State record, except in 1897 and 1927. February was the fifteenth consecutive month with the precipitation below the normal. However, there were slight plus departures at nine stations. The average snowfall, 1.6 inches, was by far the lowest average for any February of State record. There was practically no snowfall or snow on the ground for the first and last weeks of the month. The streams were well filled at the close of the month and there was slightly more water in wells. Plowing and other outdoor work progressed rapidly under generally favorable conditions. Winter grains were also in fair condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 35.8°. The departure from the normal for 40 stations having ten or more years of record was +3.6°. The warmest periods were from the 1st to the 4th, 6th to the 9th, 12th to the 14th, 16th to the 20th, and on the 28th, the highest temperature occurring generally from the 6th to the 8th and on the 28th. The lowest temperatures were on the 4th, 5th, and 11th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 2.57 inches. The departure from the normal for 58 stations having ten or more years of record was −0.56 inch. The precipitation was fairly well distributed, but was lightest over the eastern panhandle counties. Practically all the precipitation occurred from the 7th to the 10th, 13th to the 14th, 17th to the 20th, and on the 28th. At eighteen stations the snowfall was only a trace. Most of the snow was measured on the 9th, 11th, 14th, 20th and 21st, the greatest monthly amount, 12 inches, being at Pickens.

MISCELLANEOUS PHENOMENA

Auroras: Elkins, 27th; Piedmont, 15th.

Fogs, dense: Alpena, 8th and 19th; Arbovale, 8th and 18th; Bancroft, 8th and 20th; Bens Run, 3d; Elkins, 3d, 5th, 6th, and 25th; Hinton, 3d, 4th, 5th, 20th, 23d, and 27th; Marlinton, 8th and 18th; New Cumberland, 4th; Pickens, 9th and 20th; Richwood, 7th, 8th, and 17th; Rowlesburg, 8th; Spencer, 20th; Terra Alta, 4th, 7th, and 18th; Wheeling, 5th, 6th, 26th, 27th, and 28th; Williamson, 5th, 7th, 8th, 13th, 17th, 20th, 23d, 26th, and 27th.

MISCELLANEOUS PHENOMENA (Continued)

Halos, lunar: Wellsburg, 2d; Elkins, 27th.

Halo, solar: Ryan, 16th.

Sleet: Marlinton, 7th and 17th; Richwood, 9th and 19th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.

Reference letters [a], [b], [c] appearing in the table indicate number of missing days: for example, [b] represents two days, etc.

Daily Precipitation for February, 1931

HENRY C. HOWE, Meteorologist

Vol. XXXIX Parkersburg, W. Va., March, 1931 No. 3

GENERAL SUMMARY

March, 1931, was the cloudiest month of State record, with an average of 21 cloudy days and an average of only four clear days. At five stations there were no clear days and there was only one clear day at seven stations. The month averaged decidedly cool, the temperature being nearly continuously below the normal. The highest temperature recorded was only 68°, the lowest State maximum temperature for March, except in 1915. The lowest temperature was 10°, while zero temperature was recorded in March for sixteen of the past years of record. The precipitation was slightly below the normal, making sixteen consecutive months with the precipitation below normal. The snowfall averaged much above the normal and was exceptionally heavy in most of the mountain regions. The falls were light to moderate over the extreme eastern and the western counties, where the snowfall melted nearly as fast as it fell. The month was especially favorable for winter grains. Much plowing was also done.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 37.4°. The departure from the normal for 39 stations having ten or more years of record was —5.3°. The temperature was above the normal only four or five days, when the plus departures were only slight. The highest temperature occurred generally on the 1st, 24th, 27th and 28th. The lowest temperature occurred generally on the 3d, 8th, and 13th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.52 inches. The departure from the normal for 57 stations having ten or more years of record was —0.26 inch. The precipitation was much the heaviest over the mountain regions and was lightest over the western and southern counties. The greater portion of the precipitation occurred on the 1st, 6-11th, 19-20th, 22-23d, 25-26th, and the 28-29th; but precipitation was frequent, snow or rain being recorded on nearly every day of the month. Most of the snowfall fell from the 4th to the 10th. The heaviest monthly snowfall in inches was as follows: Pickens, 46.0; Alpena, 33.0; Horton, 29.4; Richwood, 21.2. At Alpena there was 25 inches of snow on the ground on the 12th, and at Pickens 24 inches on the 11th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 1st; Beckley, 1st; Elkins, 7th; Marlinton, 28th; Pickens, 1st, 20th, and 26th; Terra Alta, 1st, 7th, 16th, 17th, 20th, and 26th.

Hail light: Mannington and Valley Chapel, 24th.

Halo, solar: Parkersburg, 18th.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Alpena, 29th and 30th; Bayard, 30th and 31st; Beckley, 30th; Crawford, 29th and 30th; Martinsburg, 8th; New Cumberland, 19th; Pickens, 29th and 30th; Richwood, 19th.

Thunderstorms (dates and number of stations reporting): 7th, 1; 8th, 1; 14th, 2; 24th, 17; 25th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for March, 1931

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., APRIL, 1931 No. 4

GENERAL SUMMARY

The temperature averaged somewhat below the normal and the precipitation considerable above. There were three distinct temperature periods, two of cool weather and one of warm weather. Light to heavy frosts occurred early in the month, doing no damage, and heavy to killing frosts at the close of the month, when the temperature fell to 32° at most stations and to near 20° at a few of the mountain stations. Some damage resulted to tender plants but there was only slight damage to fruit. The precipitation was frequent and well distributed over the State. At the close of the month ground was being prepared for corn. Apple trees were in full bloom. The month was favorable for growth and farm work.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 50.7°. The departure from the normal for 39 stations having ten or more years of record was —1.0°. The temperature was somewhat below the normal until the 8th. From the 8th to the 21st the temperature was continuously above the normal, with the highest readings generally on the 14th and 19th. The temperature was continuously below the normal from the 22d to the end of the month, the lowest temperature of the month occurring at about one-half the stations on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 83 stations, was 4.12 inches. The departure from the normal for 55 stations having ten or more years of record was +0.48 inch. The greater portion of the precipitation was measured on the 1st, 4th, 8th, 11th, 18th, 22-23d and the 26th, with greatest amounts on the 1st and 22d In most sections the snow melted nearly as fast as it fell, but in the mountain regions the monthly amounts ranged generally from 5 to 19 inches.

HAIL

Light hail fell in sections of Ohio County on the 27th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, Hinton, and Thomas, 4th; Elkins, 5th; Elkins and Grafton, 17th; Arbovale, Bancroft, Elkins, Grafton, Mannington, Marlinton, and Spencer, 18th; Marlinton, 20th.

Halo, lunar: Parkersburg, 2d.

Halo, solar: Ryan, 30th.

Sleet: Bayard, 1st and 22d; Bens Run, 26th; New Cumberland, 2d; Thomas, 1st; Wardensville, 1st; Wellsburg, 1st and 26th; Wheeling, 26th.

Thunderstorms (dates and number of stations reporting): 3d, 4; 4th, 7; 20th, 3; 21st, 1; 23d, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters. a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for April, 1931

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., MAY, 1931 No. 5

GENERAL SUMMARY

May weather was characterized by frequent showers, thunderstorms and hail, giving generally heavy rain in the central, north-central and eastern counties. At most stations in the western portion of the State the precipitation was near the normal. The month was also cool, with light to killing frosts early in the month and on the 24th In the central or mountain counties the frost caused considerable damage to beans and potatoes. The temperature fell to 32° or below at fourteen stations on the 24th. Notwithstanding frequent and heavy rains in many portions of the State, crops made fair to good growth and were in satisfactory condition at the close of the month; but most crops were weedy and much in need of cultivation.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 60.6°. The departure from the normal for 41 stations having ten or more years of record was −1.0°. The decidedly cool periods of the month were from the 1st to the 5th and from the 21st to the 26th, with light to killing frosts on the 1st, 4th and 24th. Moderately warm weather prevailed from the 16th to the 20th and from the 27th to the 31st.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 5.09 inches. The departure from the normal for 58 stations having ten or more years of record was +1.04 inches. The bulk of the precipitation was received on the 2-3d, 7-8th, 10-14th, 17th, 20th-23d, 25th and 31st. The greatest amounts were measured on the 7-8th, 13-14th, 21st and 23d. Traces of snow were noted at ten stations.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: 7th.—Summers; 9th.—Brooke, Lewis, Preston and Wood; 10th.—Harrison, Gilmer and Marion; 12th.—Grant, Mingo and Wood; 13th.—Randolph; 14th.—Upshur; 18th.—Preston and Randolph; 19th.—Brooke, Hampshire, Pleasants, Tucker and Upshur; 22d.—Nicholas and Raleigh; 24th.—Ohio; 25th.—Cabell; 29th.—Grant, Lewis and Tucker.

MODERATE HAIL

Moderate hail, doing only slight damage, fell at Piedmont on the 19th and 30th, and at Grafton on the 18th.

HEAVY HAIL

About the middle of the afternoon on May 11, a destructive hail storm, attended by heavy rain, swept over the Falling Springs district, Greenbrier County. The storm moved southward about five miles, covering a territory near a mile in width. The storm was most severe in and near Renick, where much damage resulted. Composition roofs and automobile roofs were riddled, many windows broken, fruit trees stripped of leaves, and gardens destroyed. Many chickens were killed. The stones were reported as about the size of hulled walnuts. [illegible] sometime after the storm the hail on the ground in places was several inches [illegible]

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d and 18th; Clarksburg, 4th; Davis, 15th; Glenville, 4th; Marlinton, 2d, 19th, 26th, 27th, and 30th; Pickens, 2d and 12th; Terra Alta, 8th; Wellsburg, 18th; Williamson, 4th, 15th, and 22d.

Halo, lunar: Elkins, 24th.

Halo, solar: Terra Alta, 9th.

Thunderstorms (dates and number of stations reporting): 2d, 1; 3d, 2; 7th, 10; 8th, 3; 9th, 6; 10th, 14; 11th, 5; 12th, 8; 13th, 1; 14th, 5; 17th, 9; 18th, 7; 19th, 6; 20th, 3; 21st, 1; 22d, 10; 23d, 2; 24th, 2; 25th, 12; 26th, 2; 30th, 9; 31st, 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for May, 1931

WEST VIRGINIA SECTION

40

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., JUNE, 1931 No. 6

GENERAL SUMMARY

June averaged warm and dry. The temperature was generally considerably below the normal during the first decade, the lowest temperatures for the month being general on the 2d and 10th, when light frost occurred in sections of the northern mountain regions. No damage of consequence was reported. High temperature prevailed from the 20th to the close of the month, giving maximum temperatures above 90° on several days, and near 100° or slightly above during the period at many stations. The precipitation was well distributed throughout the month but the distribution over the State was unsatisfactory. Hail fell at many stations but damaging hail was reported at only a few stations. Moderately high wind occurred in many sections of the State on the 26th, but practically no damage resulted. Plant growth was rapid during the last two decades and all crops were in good condition at the close of the month, although the conditions were droughty during the last week.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 69.8°. The departure from the normal for 42 stations having ten or more years of record was +1.0°. The month opened cool and decidedly cool weather also prevailed from the 8th to the 11th. On the 16th, 17th and 18th the temperature was slightly below the normal. Decidedly warm weather prevailed from the 20th to the close of the month.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 3.24 inches. The departure from the normal for 61 stations having ten or more years of record was —1.38 inches. The precipitation was greatest over the northern counties and least over the eastern panhandle and the southern counties. Most of the precipitation was received from the 5th to the 8th, on the 14-15th, 21st, 23d and the 26-27th, the greatest amounts being measured on the 5th, 8th, 23d, and 27th.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Tucker, 5th and 6th; Lewis, 6th and 14th; Greenbrier and Raleigh, 7th; Randolph, 13th; Brooke and Pleasants, 20th.

MODERATE HAIL

Moderate hail, doing but slight damage, fell in sections of Grant County on the 6th, Randolph County on the 14th, and Ohio County on the 26th.

HEAVY HAIL

Heavy hail fell in the vicinity of Junior, Barbour County, on the 14th. The storm moved south for about two miles, covering a territory about one-half mile in width. The stones were reported as about three-eighth of an inch in diameter. The damage caused to crops and roofs was estimated at about $7,000.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 14th and 27th; Arbovale, 2d, 6th, and 28th; Bancroft, 2d, 13th, and 28th; Bens Run, 9th, 12th, and 30th; Elkins, 10th, 11th, 17th, and 28th; Fairmont, 2d; Marlinton, 2d, 3d, 10th, 11th, 13th, 17th, 19th, 20th, and 24th; Parkersburg, 15th and 30th; Terra Alta, 11th; Wellsburg, 2d, 12th, and 28th; Williamson, 17th.

Frost, light: Beckley, 2d and 10th; Pickens, 2d and 10th.

Thunderstorms (dates and number of stations reporting): 1st, 1; 4th, 8; 5th, 9; 6th, 11; 7th, 11; 8th, 3; 9th, 1; 12th; 3; 13th, 8; 14th, 19; 15th, 7; 16th, 1; 20th, 6; 21st, 7; 22d, 9; 23d, 12; 24th, 3; 26th, 15; 27th, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., JULY, 1931 No. 7

GENERAL SUMMARY

The past month was exceptionally warm, the mean temperature, 76.8°, being the highest of State record except in 1901, when the mean temperature for the State averaged 77.4°. The average temperature at a few of the stations having long records was as high or higher than in 1901. The precipitation averaged slightly above the normal but was unfavorably distributed over the State. There were several local excessive rain and heavy hail storms, attended by wind-rushes, causing considerable damage to crops and slight damage to buildings. It was a month of excellent growth and all crops were in good condition throughout the month. Pastures were short, however, over the northwestern counties.

TEMPERATURE

The monthly mean for the State, determined from 50 stations, was 76.8°. The departure from the normal for 39 stations having ten or more years of record was +4.0°. There were three periods of high temperature: from the 1st to the 9th, 13th to the 21st, and the 27th to the end of the month, the highest readings occurring on the 1st, 2d, 16th, 30th and 31st. The temperature was lowest on the 11-12th and 26th.

PRECIPITATION

The average precipitation for the State, determined from 85 stations, was 4.78 inches. The departure from the normal for 55 stations having ten or more years of record was +0.12 inch. The precipitation was heaviest over the central and southern counties and lightest over the northwestern and northern counties. The bulk of the precipitation was measured on the 3d, 10th, 16-17th, 20-24th and the 31st, excessive rain fell at Alpena, Randolph County on the latter date.

LIGHT HAIL

Light hail fell in portions of the following counties on dates given: Mercer, 8th; Cabell, 10th; Berkeley, Hancock, Lewis and Pocahontas, 23d; Berkeley, 31st.

HEAVY HAIL

Heavy hail and excessive rain, attended by a wind-rush, caused considerable damage to crops over the west-central portion of Mason County. A silo was also blown over, lightning struck a garage, doing some damage, and a tree was blown down, doing slight damage to a house.

Heavy hail, excessive rain, attended by a wind-rush, blew over two barns near Hurricane, Putnam County, on the 16th. A cow was killed.

Heavy hail and excessive rain, attended by a wind-rush, caused considerable damage between Lewisburg and Ronceverte, Greenbrier County. A barn was struck by lightning, branches were broken from trees, and considerable damage was caused to crops.

A heavy hail storm swept over the Cherry Run Orchard, Morgan County, on the 16th. All the crop of Transparent apples left on the trees was destroyed. Three carloads of fruit had been picked before the storm. Nearly 10,000 bushels of apples were destroyed by the storm.

Two men were killed by lightning near Morgantown on the 16th. The men were working in the field.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters. ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1931

HENRY C. HOWE, Meteorologist

VOL. XXXIX PARKERSBURG, W. VA., AUGUST, 1[illegible] No. 8

GENERAL SUMMARY

The past month was the wettest August since 1926 and was the fourth wettest August of State record. The rainfall at two stations was more than ten inches. At twelve stations the fall was eight inches or more. At Kanawha Falls 5.25 inches fell in the 24 hours ending on August 21. However, owing to long continued dry weather no flood stages were reached. Some damage was caused by washing and there were complaints of shocked grains sprouting in the fields. The temperature for the month averaged practically normal, the month being nearly equally divided into cool and warm weather periods. No damaging storms were reported and no station reported hail. It was a month of excellent growth. The wheat crop was good and at the close of the month corn was generally in excellent condition and the fruit crop was large. Owing to low prices, caused by an overloaded market, large quantities of apples and peaches will rot in the fields.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 71.6°. The departure from the normal for 47 stations having ten or more years of record was +0.2°. The temperature was generally considerably above the normal from the 1st to the 9th and the 13th to the 19th, with the highest readings occurring generally on the 1st, 2d, 3d, 7th and 8th. The weather was cool from the 10th to the 14th and mostly cool from the 20th to the end of the month, the lowest readings occurring on the 24th and 30th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 6.38 inches. The departure from the normal for 60 stations having ten or more years of record was +2.22 inches. The precipitation was greatest over the central counties and least over the northwest counties. Most of the precipitation was received from the 1st to the 4th, 9th to the 13th, 19th to the 22d, and from the 25th to the 29th, the greatest amounts being recorded on the 10th and 20th-23d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 10th; Arbovale, 1st, 3d, and 24th; Brandywine, 28th; Elkins, 1st, 6th, 7th, 13th, 14th, 16th, 17th, 18th, and 24th; Hinton, 3d, 7th, 8th, 14th, 17th, and 25th; Mannington, 6th, 7th, 11th, 12th, 14th, 15th, 17th, and 24th; Marlinton, 4th, 6th, 7th, 8th, 13th, 15th, 17th, 18th, 25th, 26th, and 30th; New Cumberland, 6th, 17th, and 24th; Parkersburg, 17th; Pickens, 10th; Pt. Pleasant, 17th; Richwood, 24th; Terra Alta, 2d, 3d, 5th, 10th, 12th, and 27th; Wellsburg, 7th; Wheeling, 7th, 15th, 16th, 17th, 18th, 23d, 24th, and 26th; Williamson, 11th and 17th.

MISCELLANEOUS PHENOMENA (Continued)

Frost, light: Bayard and Horton, 30th.

Thunderstorms (dates and number of stations reporting): 1st, 10; 2d, 9; 3d, 7; 4th, 5; 5th, 2; 7th, 2; 9th, 5; 10th, 4; 11th, 1; 12th, 2; 18th, 1; 19th, 6; 25th, 7; 26th, 8; 27th, 6; 28th, 5; 29th, 1; 30th, 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1931

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XXXIX Parkersburg, W. Va., September, 1931 No. 9

GENERAL SUMMARY

September was warm and wet. The average temperature was 70°. The September average temperature was higher in only four years of previous State record, 1896, 1900, 1921 and 1925. The temperature was above the normal for two-thirds of the month. Cool weather prevailed on the last two days, giving light frosts in sections of the northern agricultural regions and heavy to killing frosts in sections of the northern mountain regions. No damage resulted, owing to the lateness of the season. The precipitation averaged practically one inch above the normal and was well distributed over the State and throughout the month. Heavy rain fell during the night of the 25-26th, giving slightly more than one-third of the month's rainfall. The month was favorable for ripening late crops, threshing grains, filling silos, and other late fall work. The fruit crop was abundant, so large that much fruit rotted in the fields.

THE LIBRARY OF THE
NOV 9 193
UNIVERSITY OF ILLINOIS

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 70.0°. The departure from the normal for 41 stations having ten or more years of record was +4.0°. The temperature for the first eight days averaged about normal. Warm weather set in on the 9th and continued until the 24th, the temperature averaging about eleven degrees above the normal for that period. The 29th and 30th were cool, with scattered frosts.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 3.91 inches. The departure from the normal for 61 stations having ten or more years of record was +0.87 inch. Practically all the precipitation was measured on the 2-3d, 14-18th, 20th-21st, 22d-24th, and the 25-26th. Moderate heavy rain fell on the 16-17th and the 23d-24th. Heavy rain fell on the 25-26th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 4th, 5th, 7th, 17th, 21st, 23d, and 25th; Bancroft, 1st, 4th, 8th, 10th, 11th, 13th, 14th, 17th, 21st, 22d, 23d, 29th, and 30th; Elkins, 4th, 7th to the 13th, 19th, 20th, and 29th. Hinton, 4th, 5th, 8th, 10th, 11th, 17th, 18th, 21st, 23d, 29th, and 30th; Marlinton, 1st, 2d, 4th, 5th, 7th to the 15th, 22d, 25th, 29th, and 30th; Parkersburg, 4th, 8th, and 11th; Terra Alta, 2d, 3d, 10th, 15th, 22d, and 24th; Wellsburg, 29th and 30th; Williamson, 8th, 9th, 29th, and 30th.

Hail light: Richwood, 11th; Wellsburg, 14th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 2d, 1; 3d, 1; 4th, 2; 5th, 1; 11th, 2; 12th, 1; 14th, 1; 15th, 4; 17th, 4; 18th, 3; 19th, 2; 20th, 9; 21st, 2; 22d, 3; 23d, 13; 24th, 1; 25th, 3; 26th, 11.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for September, 1931

VOL. XXXIX PARKERSBURG, W. VA., OCTOBER, 1931 No. 10

GENERAL SUMMARY

October was warm and dry. The average temperature, 57.0°, was as high or higher than for any October for the past ten years. The temperature was above the normal for about twenty days. The highest temperature occurred at the close of the first week and the lowest on the 18-19th, when heavy to killing frosts were general over the State. The rainfall was well distributed throughout the month and over the State. The month was exceptionally pleasant and apple-picking and other farm and general work progressed rapidly. At the close of the month wheat was looking good and pastures and meadows were in fair condition.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 57.0°. The departure from the normal for 41 stations having ten or more years of record was +2.7°. Warm weather prevailed from the 1st to the 9th and the 28th to the 29th, with the highest readings occurring generally on the 7th. Cool weather prevailed from the 17th to the 20th and at the close of the month, with the lowest temperature occurring generally on the 18th and 19th.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 1.66 inches. The departure from the normal for 58 stations having ten or more years of record was −1.47 inches. The precipitation was below the normal for every station. The precipitation was generally greatest over the northern mountain counties and least over the eastern and southern counties. Practically all the precipitation occurred on the 5-6th, 8-9th, 11-12th, 14-17th, 24-25th, and the 29th-31st, the greatest amounts being measured on the 9th, although about one-half of the month's rainfall was received from the 14th to the 17th, inclusive. Snow flurries occurred at a few of the northern mountain stations on the 17th and light snow or snow flurries on the 31st. There were measurable amounts at Cheat Bridge, Terra Alta and Thomas.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 4th, 7th, 8th, 10th, and 23d; Bancroft, 1st to the 7th, 10th to the 24th, 26th and 27th; Elkins, 1st, 3d to the 7th, 10th, 11th, 19th, 20th, 22d, 23d, and 24th; Fairmont, 10th, 22d, 23d, and 24th; Grafton, 26th; Hinton, 1st, 2d, 3d, 6th, 8th, 10th, 19th, 21st to the 24th, and 29th; Huntington, 10th, 19th, 23d, 26th, and 28th; Marlinton, 1st to the 11th, 22d, 23d, and 24th; New Cumberland, 2d, 3d, and 4th; Parkersburg, 19th, 20th, and 23d; Parsons, 22d and 23d; Pickens, 9th; Pt. Pleasant, 5th, 9th, 18th, 20th, and 21st; Rowlesburg, 4th, 5th, 6th, 8th, and 10th; Terra Alta, 5th and 21st; Thomas, 6th, 9th, 10th, 22d, and 23d; Wellsburg, 10th; Wheeling, 3d, 4th, 6th, 10th, 13th, 19th, 21st to the 24th, and 26th; Williamson, 2d, 18th, 21st, 22d, 23d, 25th, 26th, and 29th.

MISCELLANEOUS PHENOMENA (Continued)

Hail, light: Terra Alta and Wheeling, 16th; Parsons, 17th; Williamson, 31st.

Halo, lunar: Elkins, 27th.

Sleet: Elkins, 16th and 17th.

Thunderstorms (dates and number of stations reporting): 5th, 1; 7th, 1; 8th, 6; 9th, 1; 14th, 1; 15th, 2; 16th, 1; 17th, 3; 24th, 1; 25th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for October, 1931

HENRY C. HOWE, Meteorologist

Vol. XXXIX Parkersburg, W. Va., November, 1931 No. 11

GENERAL SUMMARY

The past month was the warmest November of State record, the average temperature, 51.3°, being 1° higher than for the warm November in 1902, and more than 8° higher than the November normal. The highest temperature of November record, 88°, was noted. For nearly three consecutive weeks the temperature was generally much above the normal. The precipitation was about 1 inch below the normal, but it was well distributed over the State and throughout the month, except over most of the extreme northeastern counties, where conditions were reported as droughty as for the fall of 1930. The snowfall was exceptionally light and fell mostly in the northern counties. During most of the month the fields and pastures were green and stock remained in the pastures until near the end of the month.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 51.3°. The departure from the normal for 42 stations having ten or more years of record was +8.6°. The temperature was somewhat below the normal until the 8th, when an exceptionally long and warm weather period set in and continued until the end of the month, excepting the 26-27th, when the temperature was considerably below the normal. The lowest temperatures occurred on the 7th and 26th and the highest generally from the 17th to the 20th

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 1.81 inches. The departure from the normal for 61 stations having ten or more years of record was −1.08 inches. Practically all the rainfall occurred on the 1st, 8th, 11-14th, 18th, 27th and the 29-30th, the greatest amounts being measured on the 13th, 18th, 27th, and 30th. Light snow or snow flurries were noted on the 1st, 7th, 26th and 27th, but measureable amounts were recorded at only fourteen northern stations. The greatest amount recorded, 4 inches, was at Wellsburg.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 15th, 22d, 24th, and 28th; Bancroft, 5th, 10th, 15th, and 19th; Clay, 15th; Elkins, 9th, 10th, 16th, 17th, 19th, 22d, 23d and 24th; Fairmont, 19th; Glenville, 12th and 19th; Grafton, 12th; Hinton, 3d, 5th, 9th, 10th, 13th, 17th, 23d, 24th, 29th and 30th; Huntington, 10th and 27th; Marlinton, 8th to the 11th, 15th, 17th, and from the 22d to the 24th; Martinsburg, 18th; New Cumberland, 14th, 22d and 23d; Parkersburg, 22d; Parsons, 20th and 21st; Pickens, 27th; Pt. Pleasant, 5th, 19th, and 22d; Terra Alta, 1st, 13th, 14th, and 27th; Wellsburg, 16th, 17th, and 23d; Wheeling, 4th, 5th, 7th, 9th, 10th, 14th, 15th, 17th, 19th, 23d and 24th; Williamson, 2d, 3d, 5th, 10th, 12th, 15th,

MISCELLANEOUS PHENOMENA (Continued)

19th, 24th, and 26th.

Halo, lunar: Parkersburg, 17th.

Sleet: Richwood, 1st; Elkins and Huntington, 26th; Arbovale, Bayard, Elkins, Kearneysville, Martinsburg, Moorfield, and Parkersburg, 27th.

Thunderstorms: Bens Run, 8th; New Cumberland, 13th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for November, 1931

Vol. XXXIX Parkersburg, W. Va., December, 1931 No. 12

GENERAL SUMMARY

The past month, with an average temperature of 42°, was the warmest December of State record, except in 1923, when the December average temperature was 43.1°. After the 8th the temperature was continuously above the normal, except the 26-27th, and for about ten days of that period the averages were from about 15° to 20° above the normal. The precipitation was considerably above the normal and was well distributed throughout the month and fairly well distributed over the State, keeping the smaller streams well filled and the soil thoroughly soaked. The snowfall was the least of December State record, and was unimportant except at five or six stations. No snow was observed at fifty-eight stations. In the better agricultural regions stock remained in the open, making a great saving of feed.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 42.0°. The departure from the normal for 43 stations having ten or more years of record was +8.2°. The first eight days averaged below the normal and the temperature was also slightly below the normal on the 26-27th. The temperature averaged generally much above the normal for the rest of the month. The lowest temperature recorded was 8°. In all other Decembers of State record the temperature was lower. The highest temperature was 75°.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 3.91 inches. The departure from the normal for 60 stations having ten or more years of record was +0.42 inch. The precipitation was heaviest over the mountain counties and was lightest over the extreme northeastern counties. Practically all the precipitation was measured on the 4-5th, 9-14th, 19-25th, 28-29th and the 31st, the greatest amounts being received on the 9th, 12th and 22d. There were snow flurries or light snow in the mountain counties on the 4th, 9th, 25th and the 28th. The monthly average was 0.3 inch. The greatest amount of snow, 7 inches, fell at Cheat Bridge.

MISCELLANEOUS PHENOMENA

Fogs, dense: Aberdeen, 21st; Bancroft, 6th; Charleston, 19th; Clay, 2d, 12th, and 22d; Elkins, 10th, 11th, 20th, 21st, 29th and 30th; Glenville, 30th; Hinton, 13th, 14th, 16th, 18th, 23d, 24th, 29th and 30th; Huntington, 3d, 9th, 10th, and 21st; Kearneysville, 22d; Marlinton, 4th and 31st; New Cumberland, 21st and 28th; Pickens, 19th; Pt. Pleasant, 18th; Terra Alta, 4th, 5th, 9th, 10th, 19th and 20th; Thomas, 10th, 19th and 20th; Wheeling, 3d, 8th, 17th, 18th, 21st, and 28th; Williamson, 16th and 19th.

Halos, lunar: Huntington, Pickens, and Ryan, 20th.

Halo, solar: Terra Alta, 3d.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Elkins and Terra Alta, 8th; Beckley, Brandywine, Horton, Marlinton, Moorefield, Rainelle, Richwood, Terra Alta, and Union, 9th; Elkins, 25th; Richwood, 29th; Bayard, 31st.

Thunderstorms (dates and number of stations reporting): 11th, 3; 12th, 1; 13th, 10; 14th, 1; 15th, 1; 22d, 16; 23d, 1; 24th, 8.

ERRATA

The following changes should be made in the published precipitation reports for DAVIS for 1931:

January: On the 15th .20 and total for month 2.32.
March: On the 11th and 15th both .20 and total for month 2.01.
May: On the 17th .20 and total for month 7.84.
July: On the 10th 1.03 and total for month 5.97.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1931

HENRY C. HOWE, Meteorologist

Vol. XXXIX PARKERSBURG, W. VA., YEAR, 1931 No. 13

GENERAL SUMMARY

The year 1931 was exceptionally warm. The precipitation averaged slightly below the normal. The average temperature, 51.7°, was the highest average of State record, except for 1898 and 1921, when the averages were 54.8° and 55.6°, respectively. The average snowfall was the lowest of State record, except for 1919. There was some damage by hail and wind-rushes during thunderstorms in July. The rivers were low nearly all the year. There were no floods.

January, February and March were dry, but there was ample rain during April and May. The conditions were droughty at the close of June, but the rainfall during July, August and September was considerably above the normal. The late fall months were dry but December was wet.

The temperature for January and February was considerably above the normal, the spring months were cool and the summer months warm. The temperature was also considerably above the normal for the last four months.

The conditions were favorable for nearly all crops and fruits. The apple crop was exceptionally large, so large that much of the yield rotted in the fields.

The season of growth extended from early May to about October 18, being near the normal.

Cloudiness was near the normal. The sunshine at Parkersburg averaged 44 per cent. of the normal, or 2 per cent. below the normal. For Elkins the average was 46 per cent., or 1 per cent. above the normal.

The wind movement for Parkersburg was 39,537 miles, and at Elkins 38,466 miles.

THE WEATHER BY MONTHS

January.—Following the driest year of State record, the past month, with an average precipitation of 1.37 inches, was the driest January of State record. Streams were low and water was scarce for all purposes. The snowfall was less than one-half the normal and the ground was practically bare in most of the agricultural regions during the cold period of the month, or from the 1st-2d, 14-16th and the 22-23d. The temperature averaged considerably above the normal.

February.—February was considerably warmer than usual. The temperature fluctuations were slight, the highest reading for the month being 68° and the lowest 5°. The precipitation was below normal, making the fifteenth consecutive month with deficient precipitation. There was practically no snow during the first and last weeks. Good rains on the 17-18th relieved the drought considerably. The conditions were favorable for winter grains.

March.—March was exceptionally cloudy and cold. While the temperature averaged more than 5° below the normal, the lowest temperature was only 10°. The precipitation was slightly below the normal but the snowfall was much above the average, being heavy in most of the mountain regions. The falls were moderate over the eastern and western counties, where the snow melted nearly as fast as it fell. The following monthly amounts were noted: Pickens, 46 inches; Alpena, 33 inches; Horton, 29.4 inches; Richwood, 21.2 inches.

April.—The temperature averaged somewhat below the normal and the precipitation considerably above. There were three marked periods of temperature, two of cool weather and one of warm weather. The temperature was continuously below the normal from the 22d to the close of the month, the lowest temperature of the month occurring at about one-half the stations on the 30th. The highest readings were on the 14th and 19th. Heavy to killing frosts occurred at the close of the month, causing some damage to tender plants.

May.—This month was characterized by frequent showers, thunderstorms and hail. The month was cool, with light to killing frosts early in the month and on the 24th, causing considerable damage to potatoes and beans. Not withstanding unfavorable weather conditions, crops made fair to good growth and were in satisfactory condition at the close of the month. The precipitation averaged slightly more than one inch above the normal.

June.—June was warm and dry. No frost damage of consequence was reported. The temperature was high from the 20th to the close of the month. Hail fell at many stations but damaging hail fell at only a few places. The wind was moderately high on the 26th but practically no damage resulted. Plant growth was rapid during the last two decades.

July.—July was exceptionally warm. The precipitation was slightly above the normal but was unfavorably distributed. There were several local excessive rains and heavy hail storms, attended by wind-rushes, causing considerable damage. In Mason County a silo was blown over and lightning struck a garage, causing considerable damage. Heavy hail and excessive rain, attended by a wind-rush, blew over two barns in Putnam County. Heavy hail and excessive rain, attended by a wind-rush, caused considerable damage between Lewisburg and Ronceverte. A heavy hail storm swept over the Cherry Run Orchard in Morgan County, on the 16th, destroying nearly all the crop of Transparent apples.

August.—The rainfall for August averaged 2.22 inches above the normal. Considerable damage resulted from soil washing and there were many reports of grain sprouting in the fields. The wheat and corn crops were good at the close of the month and a large fruit crop was indicated.

September.—This month was warm and wet. The temperature was above the normal for two thirds of the month, but light frosts occurred in the northern agricultural districts and killing frosts in the northern mountain region on the last two days. One third of the month's rainfall was received on the 25-26th. The month was favorable for ripening crops. The fruit crop was abundant.

October.—October was warm and dry. The average temperature was as high or higher than for any other October of State record for the past ten years. The precipitation was much below the normal. Heavy to killing frosts were general over the State on the 18-19th. The conditions were especially favorable for apple-picking and other farm work.

November.—This month was the warmest November of State record. A maximum temperature of 88° was noted, also a State record for November. The precipitation was considerably below normal, especially in the northeastern counties, where droughty conditions prevailed. The snowfall was generally unimportant. Stock remained in the open nearly the entire month.

December.—This month was also the warmest of December State record, except in 192[illegible]. After the 8th the temperature was continuously above the normal, except on the 26-27th. The precipitation was considerably above the normal, filling the smaller streams and thoroughly soaking the soil. The snowfall was unimportant, except at five or six stations. No snow was observed at 58 stations. Stock remained in the open, making a great saving of feed.

ERRATA.—Correct Monthly Climatological Data for 1930, to read: November.—Alpena, make monthly precipitation 2.14 inches, Rainelle, make total snowfall 13.4 inches. December.—Bancroft, make total snowfall 3.6 inches, Bayard, make total snowfall 18.5 inches. Fairmont, make mean maximum temperature 37.4° and mean monthly temperature 30.8°.
